Multivariable Mathematics combines linear algebra and multivariable mathematics in a rigorous approach. The material is integrated to emphasize the recurring theme of implicit versus explicit that persists in linear algebra and analysis. In the text, the author includes all of the standard computational material found in the usual linear algebra and multivariable calculus courses, and more, interweaving the material as effectively as possible, and also includes complete proofs. * Contains plenty of examples, clear proofs, and significant motivation for the crucial concepts. * Numerous exercises of varying levels of difficulty, both computational and more proof-oriented. * Exercises are arranged in order of increasing difficulty.

This extraordinary account of a remarkable journey made in 1933, through Iraq, Iran and Baluchistan (now part of Pakistan) to India is packed full of wonder, adventure, determination and love of travel and motorcycles. But what really sets this book apart are the wonderful descriptions of the people and cultures, now nearly forgotten, yet still hugely relevant in today's age: all brought evocatively to life by the stunning photos from 1933. At that time, the idea of travelling to India on a motorcycle through the Middle East was considered impossible; there were often no roads, not even any paths, and they were attempting to cross the burning deserts in the middle of August, on a tiny two-stroke motorcycle with barely enough power for the bike and rider, let alone a pillion passenger! This book is more than a fantastic adventure; it also offers some perceptive insights into the peoples, places and cultures of the time, as well as being full of drama, both personal and mechanical, as the motorcycle is urged on across the shimmering sands. A true window on the past! and a book which is definitely a iust have! for all travel and motorcycle enthusiasts.
