For downstroking Press brakes, AMADA PROMECAM has retained the principle of constant parallelism, by using a composite beam, which has been patented in 20 countries. The mastery of deflection is of greater consequence to precision bending, as without it, electronic and hydraulic monitoring on press brakes cannot be claimed as being effective.

AMADA's Fixed Height (AFH) Tooling for the HRB Series is an optimum solution to decrease setup times and increase flexibility. AFH Tooling features a consistent 120mm Punch height that eliminates frequent laser safety device adjustments and allows for safe stage bending across the length of the press brake. The machine tool industry is a small sector with a big impact. Almost all technical products are manufactured with the help of machine tools - one reason why the machine tool is considered to be »the ultimate machine". Berthold Leibinger, longtime managing partner of the machine tool and technology company TRUMPF, investigates the development of the machine tool industries of Germany, Japan and the United States since 1960. Key factors such as innovations, the importance of science and the training of employees are all examined. The structure of the machine tool industry and their characteristics are highlighted. In addition to the author's own experiences during his working life, numerous discussions held with experts and company representatives have also been taken into consideration. This analysis of the machine tool industry's development in three different countries also mentions numerous influential factors that lead to success or failure. From these, Berthold Leibinger derives recommended measures for managers of machine tool companies.
