This is the first book to provide explanations of the rules and requirements of SMM7 regarding the measurement of building services. References are also made to the SMM7 Measurement Code where appropriate. Another important feature considered is the interface between the SMM requirements and the relevant services technology. The text is strongly supported with fully worked examples, complete with detailed drawings, which are based on current industrial practice.

Describes and illustrates the application of the Standard Method of Measurement of Building Works, Seventh Edition, to the measurement of a selection of more advanced building work, including services and alterations, and the preparation of preliminaries and preambles.

The RIBA Job Book is the Royal Institute of British Architects' long-established and recognised standard reference for running construction projects. This major new update fully reflects the new RIBA Plan of Work 2013 and contemporary working practice. It embraces themes of collaboration within the project team, better briefing, advances in information technology and BIM, and the continued importance of sustainability including valuable detail on a range of 'cradle to grave' processes in a building project. Applicable to all forms of procurement and to all sizes and types of project, the RIBA Job Book provides a systematic operational framework that is comprehensive in scope and easy-to-follow, and which examines step-by-step the key obligations of the architect or lead consultant. Setting out all the actions to be undertaken throughout a project, it includes invaluable checklists, notes and practical guidance.

The Building Construction Handbook is THE authoritative reference for all construction students and professionals. Its detailed drawings clearly illustrate the construction of building elements, and have been an invaluable guide for builders since 1988. The principles and processes of construction are explained with the concepts of design included where appropriate. Extensive coverage of building construction practice, techniques, and regulations representing both traditional procedures and modern developments are included to provide the most comprehensive and easy to understand guide to building construction. This new edition has been updated to reflect recent changes to the building regulations, as well as new material on the latest technologies used in domestic construction. Measurement of buildings is the core skill of the quantity surveyor. It underpins the procurement, management, delivery and subsequent commissioning of a completed building, and must now be completed using New Rules of Measurement 2 (NRM 2). In this much-needed new measurement textbook, the measurement of the most common building elements is described using NRM2. Extensive worked examples including fully up to date hand-drawn diagrams and supporting take-off lists ensure that the reader develops a confidence in their ability to measure using NRM2 in practice. A practical step-by-step approach is used to explain and interpret the detail of the specific Work Sections of NRM2, covering a broad range of different trades, including mechanical and electrical systems; external works; groundwork; masonry; joinery; and internal finishes. Presuming no prior knowledge of measurement or NRM2, and fully up to date with current practice, including consideration of Building Information Modelling, this is the ideal text for students of measurement at HND or BSc level, as well as practitioners needing a crash course in how to apply NRM2.

Managing building services contractors can prove to be a minefield. The most successful jobs will always be those where building site managers have first built teams focused on tackling issues that might cause adversarial attitudes later on and jeopardize the project. The author shows how a simple common management approach can improve site managers' competency in overseeing building services contractors, sub traders and specialists, and maximize the effectiveness of time spent on building services.
