A major new history of the literary traditions, oral and print, of African-descended peoples in the United States.

The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments sought to seize and control the 'commanding heights' of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, *THE COMMANDING HEIGHTS* shows how a revolution in ideas is transforming the world economy - why it is happening, how it can go wrong and what it will mean for the global economy going into the twenty-first century.

In this major scholarly study of the life of Joseph A. Schumpeter, one of the great intellectual figures of the twentieth century, the distinguished economist Wolfgang Stolper delves into the mind of his former teacher, exploring the development of his ideas and, especially, their influence on politics and public policy. After reflecting briefly on Schumpeter the man, Stolper explains the evolution of Schumpeter's work, particularly his insights during the 1920s on public finance, his contributions to monetary theory and the study of business cycles, and his writings on socialism. Stolper goes on to describe and evaluate Schumpeter's public activities following World War I and his role as a finance minister, placing the development of his thought in the turbulence political context of his times. Drawing on a vast array of new and exciting sources, Stolper paints a portrait of his mentor as a decent, ambitious, and complex man whose many insights into economy and society found their way outside of the academy and into the practical world of economic policy. All readers interested in the history of economic thought and twentieth-century political and intellectual history will find this book invaluable. Wolfgang Stolper is Professor Emeritus of Economics at the University of Michigan. He is author of *The Structure of the East German Economy and Planning Without Facts* and has made seminal contributions to international economics. Originally published in 1994. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. This study broadens the conventional focus of the Great Depression to include its impact on the countries of Africa, Asia and Latin America. It covers the economic background and causes, from the international gold standard to agricultural over-production in the US. Other areas discussed include: the impact on the peasantry in developing countries; the political consequences, such as fascism in Europe; and the aftermath and the re-alignment of America, Europe and its colonies. Key areas, such as Keynesian theory, are explained in accessible terms.

The unknown history of deportation and of the fear that shapes immigrants' lives Constant headlines about deportations, detention camps, and border walls drive urgent debates about immigration and what it means to be an American in the twenty-first century. The *Deportation Machine* traces the long and troubling history of the US government's systematic efforts to terrorize and expel immigrants over the past 140 years. This provocative, eye-opening book provides needed historical perspective on one of the most pressing social and political issues of our time. In a sweeping and engaging narrative, Adam Goodman examines how federal, state, and local officials have targeted various groups for expulsion, from Chinese and Europeans at the turn of the twentieth century to Central Americans and Muslims today. He reveals how authorities have singled out Mexicans, nine out of ten of all deportees, and removed most of them not by orders of immigration judges but through coercive administrative procedures and calculated fear campaigns. Goodman uncovers the machine's three primary mechanisms—formal deportations, "voluntary" departures, and self-deportations—and examines how public officials have used them to purge immigrants from the country and exert control over those who remain. Exposing the pervasive roots of anti-immigrant sentiment in the United States, *The Deportation Machine* introduces the politicians, bureaucrats, businesspeople, and ordinary citizens who have pushed for and profited from expulsion. This revelatory book chronicles the devastating human costs of deportation and the innovative strategies people have adopted to fight against the machine and redefine belonging in ways that transcend citizenship.

Although Latin America weathered the Great Depression better than the United States and Europe, the global economic collapse of the 1930s had a deep and lasting impact on the region. The contributors to this book examine the consequences of the Depression in terms of the role of the state, party-political competition, and the formation of working-class and other social and political movements. Going beyond economic history, they chart the repercussions and policy responses in different countries while noting common cross-regional trends--in particular, a mounting critique of economic orthodoxy and greater state intervention in the economic, social, and cultural spheres, both trends crucial to the region's subsequent development. The book also examines how regional transformations interacted with and differed from global processes. Taken together, these essays deepen our understanding of the Great Depression as a formative experience in Latin America and provide a timely comparative perspective on the recent global economic crisis. Contributors. Marcelo Bucheli, Carlos Contreras, Paulo Drinot, Jeffrey L. Gould, Roy Hora, Alan Knight, Gillian McGillivray, Luis Felipe Sáenz, Angela Vergara, Joel Wolfe, Doug Yarrington

The COVID-19 pandemic is inflicting high and rising human costs worldwide, and the necessary protection measures are severely impacting economic activity. As a result of the pandemic, the global economy is projected to contract sharply by –3 percent in 2020, much worse than during the 2008–09 financial crisis. In a baseline scenario--which assumes that the pandemic fades in the second half of 2020 and containment efforts can be gradually unwound--the global economy is projected to grow by 5.8 percent in 2021 as economic activity normalizes, helped by policy support. The risks for even more severe outcomes, however, are substantial. Effective policies are essential to forestall the possibility of worse outcomes, and the necessary measures to reduce contagion and protect lives are an important investment in long-term human and economic health. Because the economic fallout is acute in specific sectors, policymakers will need to implement substantial targeted fiscal, monetary, and financial market measures to support affected households and businesses domestically. And internationally, strong multilateral cooperation is essential to overcome the effects of the pandemic, including to help financially constrained countries facing twin health and funding shocks, and for channeling aid to countries with weak health care systems.
