planning for threats to public health. With a diverse range of classic and contemporary essays written by scholars in bioethics and judges in landmark legal cases, this anthology will help you understand issues from a variety of perspectives.

This anthology represents all of the most important points of view on the most pressing topics in bioethics. Containing current essays and actual medical and legal cases written by outstanding scholars from around the globe, this book provides readers with diverse range of standpoints, including those of medical researchers and practitioners, legal exerts, and philosophers.

Contains articles published previously in various sources.

Since the original publication of *Playing God?* in 1996, three developments in genetic technology have moved to the center of the public conversation about the ethics of human bioengineering. Cloning, the completion of the human genome project, and, most recently, the controversy over stem cell research have all sparked lively debates among religious thinkers and the makers of public policy. In this updated edition, Ted Peters illuminates the key issues in these debates and continues to make deft connections between our questions about God and our efforts to manage technological innovations with

wisdom.

"The ethical issues we face in healthcare, justice, and human rights extend beyond national boundaries—they are global and cross-cultural in scope. The second edition of this interdisciplinary and international collection features new essays on gender identity, vaccines, stem cells, bioterror, and other pressing contemporary concerns"--

This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql). Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice – the maqa' sid – which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.
