This is a testament to the hard work the team has done to fix the core business ... will help attract new customers while developing connections and stickiness with our current ones.

"The third of a three-year sequence of courses designed to prepare students for a rigorous college preparatory algebra course. It uses a problem-based approach with concrete models. The course helps students to develop multiple strategies to solve problems and to recognize the connections between concepts" -- publisher's website.

A collection of articles discussing integrable systems and algebraic geometry from leading researchers in the field.

Two people driven to win. Only one can claim the prize. She's a sprint car racer driven by secrets. He's the man who must uncover them on

national TV. Slide Job: A dirty move in which a race driver skids his/her car sideways in front of another car to steal a position. Sprint car driver Morgan Blade is willing to do anything to help save her critically ill father, even become a contestant on a new TV racing reality show. But once the cameras start rolling, she realizes the cost of the prize money. If the show's sexy producer has his way, her most heartbreaking secrets will be revealed to a worldwide audience. Secrets are Tyler Dalton's business. Forced to produce one more reality show to fulfill his contract, he can't wait to get it over with and move on with his life. However, part of who he is means giving it his best. In reality TV, controversy drives ratings. So despite a combustible attraction to his star, Tyler must unveil the secrets beneath Morgan's fiery facade. But when she becomes more than just another contestant ... will he go for the slide job, even if it means losing her?

This two-volume introduction to differential geometry, part of Wiley's popular Classics Library, lays the foundation for understanding an area of study that has become vital to contemporary mathematics. It is completely self-contained and will serve as a reference as well as a teaching guide. Volume 1 presents a systematic introduction to the field from a brief survey of differentiable manifolds, Lie groups and fibre bundles to the extension of local transformations and Riemannian connections. The second volume continues with the study of variational problems on geodesics through differential geometric aspects of characteristic classes. Both volumes familiarize readers with basic computational techniques.
