Edition Five of MBoC continues the line of quality initiated by Edition One. It presents an almost encyclopedic approach to up-to-date coverage of cell biology and in doing so just happens to also provide reasonably complete coverage of biochemistry and molecular biology. It reflects the concept that modern biology is all molecular.

Thoroughly revised and updated, *Discover Biology, Second Edition*, presents the essential concepts of modern biology in a text designed specifically for nonmajors. The authors emphasize a level of detail appropriate for nonmajors, freeing instructors to focus on the scientific issues—HIV, global climate change, DNA fingerprinting, genetic engineering, cancer—that students read about in the paper, vote on in elections, and face in their daily lives. With two new chapters, refined pedagogy and art programs, and a powerful ancillary package, *Discover Biology, Second Edition*, is the best choice for the nonmajors introductory course.

The Study Guide provides a guided tour of each chapter of the text, using summaries, thought questions, and practice questions to help students achieve an even greater understanding of the material.

This new textbook is designed for non-specialist courses in biology or life sciences. It covers all aspects of the discipline from cells and organisms to population and ecology.

Does the vaccine for measles, mumps, and rubella cause autism? What is the most common reason that DNA analyses overturn incorrect criminal convictions? What genetically modified foods do most people in the United States consume (usually without knowing it)? In his popular classes and bestselling textbooks, Jay Phelan uses questions like these as a way of introducing both the practical impact and awe-inspiring wonder of biological research. Phelan knows how to captivate nonmajors with stories of how scientists investigate life. He is also a master at using the study of biology as a context for developing the critical thinking skills and scientific literacy students can draw on through college and beyond. Phelan's dynamic approach to teaching biology is the driving force behind *What Is Life?*—the most successful new non-majors biology textbook of the millennium. The rigorously updated new edition brings forward the features that made the book a classroom favorite (chapters anchored to intriguing questions about life, spectacular original illustrations, innovative learning tools) with a more focused and flexible presentation and enhanced art. And more than ever, this edition is a seamless text/media source, with its dedicated version of LaunchPad, Macmillan's breakthrough online course space which integrates an interactive e-Book, all student media, a wide range of assessment and course management features.

*David Krogh's Biology: A Guide to the Natural World* leads readers on a memorable journey through the world of biology, using relevant examples, clearly-developed illustrations, and helpful insights that will resonate with you. The Technology Update features margin callouts in the text, directing you to a significantly more robust MasteringBiology program. Widely recognized as a book that students enjoy reading, David Krogh uses discussions about social concerns and health applications, along with streamlined EOC material, to help engage you with the chapter.

*BASIC CONCEPTS IN BIOLOGY* supplies a 650 page, introductory issues-oriented approach with enormous instructional power. This title has content identical to Starr's longer *BIOLOGY, CONCEPTS AND APPLICATIONS, Sixth Edition*, except for the omission of plant and animal physiology. The "Impacts, Issues" and "How Would You Vote?" features new to this edition make biology come alive. An "Impacts, Issues" case study opens each chapter focusing on a biology-related societal issue. Short films that expand on the issue are on the free Student CD. Each chapter's "How Would You Vote?" asks students to consider biology-related news, apply knowledge, cast a vote on the web and see voting tallies. The access codes that accompany all new copies provide online access to 1) *BiologyNow*, a learning tool that helps students assess their unique study needs through pretests, post-test and personalized learning plans; 2) *InfoTrac*, a library of full text articles; 3) *vMentor*, a live tutoring service and 4) "How Do I Prepare," a feature that allows students to review basic math, chemistry, and other skills that will help them more easily master introductory biology. And now with an MP3 download of this title, you don't have to lose prep time during a long commute any MP3 player lets you or your students listen and review the text at the gym, in the library, at the office anywhere! Starr is the most successful author in non-majors biology because of her clear and engaging writing, trend-setting art, and unparalleled student and instructor media.

The Problems Book helps students appreciate the ways in which experiments and simple calculations can lead to an understanding of how cells work by introducing the experimental foundation of cell and molecular biology. Each chapter reviews key terms, tests for understanding basic concepts, and poses research-based problems. The Problems Book has be

Strike the perfect balance between level of detail and accessibility! Written for a one-semester, non-Biology majors course, *BIOLOGY TODAY AND TOMORROW* is packed with applications that are relevant to a student's daily life. The clear, straightforward writing style, in-text learning support, and trendsetting art engage students and help them understand key concepts. The accompanying *MindTap for Biology* is the most engaging and easiest to customize online solution in Biology.
