This second in the series of three volumes builds upon the basic theory of linear PDE given in volume 1, and pursues more advanced topics. Analytical tools introduced here include pseudodifferential operators, the functional analysis of self-adjoint operators, and Wiener measure. The book also develops basic differential geometrical concepts, centred about curvature. Topics covered include spectral theory of elliptic differential operators, the theory of scattering of waves by obstacles, index theory for Dirac operators, and Brownian motion and diffusion.

"There's nothing new under the sun, but there are new suns," proclaimed Octavia E. Butler. New Suns: Original Speculative Fiction by People of Color showcases emerging and seasoned writers of many races telling stories filled with shocking delights, powerful visions of the familiar made strange. Between this book's covers burn tales of science fiction, fantasy, horror, and their indefinable overlappings. These are authors aware of our many possible pasts and futures, authors freed of stereotypes and clichés, ready to dazzle you with their daring genius. Unexpected brilliance shines forth from every page. Includes stories by Kathleen Alcalá, Minsoo Kang, Anil Menon, Silvia Moreno-García, Alex Jennings, Alberto Yanez, Steven Barnes, Jaymee Goh, Karin Lowachee, E. Lily Yu, Andrea Hairston, Tobias Buckell, Hiromi Goto, Rebecca Roanhorse, Indrapramit Das, Chnelo Onwualu and Darcie Little Badger.

Gives an insider's perspective into the work of being a teacher in its various aspects - planning, teaching, assessment, technology, management, and career progression, and includes checklists, real-life documents, and sound bites from teachers.

This book offers a highly accessible introduction to natural language processing, the field that supports a variety of language technologies, from predictive text and email filtering to automatic summarization and translation. With it, you'll learn how to write Python programs that work with large collections of unstructured text. You'll access richly annotated datasets using a comprehensive range of linguistic data structures, and you'll understand the main algorithms for analyzing the content and structure of written communication. Packed with examples and exercises, Natural Language Processing with Python will help you: Extract information from unstructured text, either to guess the topic or identify "named entities" Analyze linguistic structure in text, including parsing and semantic analysis Access popular linguistic databases, including WordNet and treebanks Integrate techniques drawn from fields as diverse as linguistics and artificial intelligence This book will help you gain practical skills in natural language processing using the Python programming language and the Natural Language Toolkit (NLTK) open source library. If you're interested in developing web applications, analyzing multilingual news sources, or documenting endangered languages -- or if you're simply curious to have a programmer's perspective on how human language works -- you'll find Natural Language Processing with Python both fascinating and immensely useful.
