For example, if matrix algebra is used, theoretical exercises may be omitted. A CD of data sets is provided with the text.

The second edition of this bestselling textbook retains its unique learning-by-doing approach to econometrics. Rather than relying on complex theoretical discussions and complicated mathematics, this book explains econometrics from a practical point of view by walking the student through real-life examples, step by step. Damodar Gujarati's clear, concise, writing style guides students from model formulation, to estimation and hypothesis-testing, through to post-estimation diagnostics. The basic statistics needed to follow the book are covered in an appendix, making the book a flexible and self-contained learning resource. The textbook is ideal for undergraduate students in economics, business, marketing, finance, operations research and related disciplines. It is also intended for students in MBA programs across the social sciences, and for researchers in business, government and research organizations who require econometrics. New to this Edition: - Two brand new chapters on Quantile Regression Modeling and Multivariate Regression Models. - Two further additional chapters on hierarchical linear regression models and bootstrapping are available on the book's website - New extended examples accompanied by real-life data - New student exercises at the end of each chapter

Econometrics, the application of statistical principles to the quantification of economic models,

is a compulsory component of European economics degrees. This text provides an introduction to this complex topic for students who are not outstandingly proficient in mathematics. It does this by providing the student with an analytical and an intuitive understanding of the classical linear regression model. Mathematical notation is kept simple and step-by-step verbal explanations of mathematical proofs are provided to facilitate a full understanding of the subject. The text also contains a large number of practical exercises for students to follow up and practice what they have learnt. Originally published in the USA, this new edition has been substantially updated and revised with the inclusion of new material on specification tests, binary choice models, tobit analysis, sample selection bias, nonstationary time series, and unit root tests and basic cointegration. The new edition is also accompanied by a website with Powerpoint slideshows giving a parallel graphical treatment of topics treated in the book, cross-section and time series data sets, manuals for practical exercises, and lecture note extending the text.

This book, written by economists of Vietnamese origin, is an extremely comprehensive collection on economic issues facing Vietnam. The spectrum of topics covered includes macroeconomics, microeconomics, international trade, agriculture, education, communication, institutional reforms, income distribution and poverty measurement. Themes include: * the success of Vietnam's Doi-Moi in the early 1990's * the slowdown of economic growth in recent years * the rapidly changing external environment due to globalization * the growing environmental degradation and income inequality

This volume of Eurasian Studies in Business and Economics focuses on latest results from research in Banking and Finance, Accounting and Corporate Governance, Growth and Development, along with a focus on the Energy sector. The first part on Accounting and Corporate Governance features articles on environmental accounting, audit quality, financial information, and adoption of governance principles. The Banking and Finance part looks at risk-behavior in banks, credit ratings during subprime crisis, stakeholder management, and stock market crises. The book focuses then on the energy sector and analyzes macroeconomic impacts of electricity generation, risk dimensions in wind energy, the latest EU energy reforms, and discusses prediction models.

This volume contains contributions on a range of important issues in current financial research. Topics include the performance of fixed income mutual funds in different economic states, the determinants of long-term excess performance of the ADRs on the NYSE, the models for forecasting the Euro/US Dollar exchange rates and the U.S. mutual funds movements, the fragmentation in day and night markets, the market reactions of the U.S.-listed foreign banks to the passage of the GLB Act of 1999, the upper bounds for American options, the spread-based models for the valuation of credit derivatives, the empirical evidence on the evolution of corporate borrowers, the determinants of private debt source, and the underlying causes and resolution policies for the systematic banking crises.*A valuable addition to the research of finance*Contains contributions from key figures the world of finance*Offers broad coverage

This book addresses the issue of climate change risks and hazards holistically. Climate

change adaptation aims at managing climate risks and hazards to an acceptable level, taking advantage of any positive opportunities that may arise. At the same time, developing suitable responses to hazards for communities and users of climate services is important in ensuring the success of adaptation measures. But despite this, knowledge about adaptation options, including possible actions that can be implemented to improve adaptation and reduce the impacts of climate change hazards, is still limited. Addressing this need, the book presents studies and research findings and offers a catalogue of potential adaptation options that can be explored. It also includes case studies providing illustrative and inspiring examples of how we can adapt to a changing climate.
