Welcome to the new gold standard in critical care transport training. Published in conjunction with the American Academy of Orthopaedic Surgeons (AAOS) and the American College of Emergency Physicians (ACEP), Critical Care Transport offers cutting edge content relevant to any healthcare provider training in critical care transport. Like no other textbook in this market, Critical Care Transport thoroughly prepares medical professionals to function as competent members of a critical care team by covering the material that everyone--paramedics,

nurses, physicians, and specialty crew--needs to know to operate effectively in the prehospital critical care environment. This book meets the curricula of major critical care training programs, including University of Maryland, Baltimore County (UMBC). It covers both ground and flight transport, and meets the objectives of critical care transport certification exams such as the Certified Flight Paramedic (FP-C) exam administered by the Board for Critical Care Transport Paramedic Certification. Content includes information specific to prehospital critical care transport, such as flight physiology, lab analysis, hemodynamic monitoring, and specialized devices such as the intra-aortic balloon pump. Standard topics such as airway management, trauma, and pharmacology are covered in the context of critical care. Chapters have been authored by leading critical care professionals across the country and represent the most current, state-

As developed economies enter a period of slower growth, emerging economies such as India have become prime examples of how more can be achieved with less. Bringing together experience and expertise from across the healthcare industry, this book examines innovations that can bring about real advances in the healthcare industry.

Innovations in Healthcare Management: Cost-Effective and Sustainable Solutions explores recent innovations in healthcare from a global and Indian perspective. Emphasizing the importance of Lean healthcare and innovation, it presents low-cost, high-volume solutions that improve access to care. Providing concrete examples of the five levels of innovation present in healthcare, the book presents new concepts, methods, and tools for advancing processes and operational

flow. It includes case studies of actual results in healthcare innovation from three continents that highlight emerging global trends in healthcare system innovation. The book describes how to organize resources and flows so that given targets, such as cost, clinical quality, and patient experience, can be achieved with available resources. It also covers nontraditional ecosystems of innovation that move outside of expected technological innovations, such as innovations in social persuasion, rural health delivery, and the planning and design of hospitals. The book maintains a focus on key issues across the healthcare industry—such as access to care, demand creation, patient experiences, and data—to help readers implement new ideas and new models of delivery of affordable care in healthcare systems around the world.
