"This book is an in-depth collection aimed at developers and scholars of research articles from the expanding field of digital libraries"--Provided by publisher.

Relationship between concentration of carbon monoxide in the air and its adverse effects on man and the environment.

Principles of Physics is a well-established popular textbook which has been completely revised and updated.

"PH and Brain Function offers thorough coverage of this increasingly important area of research, beginning with the fundamental concepts, which include methodological and theoretical issues such as the measurement of pH and the concept of pH in neurobiology. It explores aspects of regulation and modulation of intracellular pH in brain cells, surveys the changes in pH that occur with neural activity and how these changes affect neural activity, and discusses the role of pH in the pathophysiology of neurological diseases." "pH and Brain Function is an important resource for researchers in all areas of neuroscience as well as cell biology and physiology." --Book Jacket.

ISC Commerce Class-XII (Vol.II)

A young lad awakens on an island, alone and brutally injured, with no memory of his past. Captain Declan Ross searched for riches that will free him and his headstrong daughter, Anne, from the piracy business forever . . . Bartholomew Thorne, an infamously ruthless pirate, seeks to destroy Ross and any who stand in his way of the legendary treasure hidden by a mysterious order of monks. With these intriguing characters and many more, Wayne Thomas Batson weaves a spell-binding adventure filled with high-seas drama where battles rage, storms brew, a long-dormant volcano awakens, and a sea creature slithers in the deep as pirates race for a cliff-top fortress.

This book introduces the methods of synoptic climatology - the relationship between the atmospheric circulation and the surface environment - and shows the vital importance of this approach in the understanding of environmental systems. This innovative and up-to-date text is both a primer for environmental scientists and a text in applied climatology for students of atmosphere science and geography. This book is constructed around the principal analytical methods of synoptic climatology: manual classification, correlation-based map-pattern classification, eigenvector-based classifications, composites and circulation indices. Four environmental scenarios illustrate the application of the synoptic climatological methods: these are urban air quality, acid rain, crop yield and fluvial hydrology.
