This volume develops a theoretical and critical foundation for understanding "maladministration"-the phenomena of harmful administrative and organisational behaviours in educational systems. Chapter authors provide theoretical and practice-based perspectives across international contexts regarding common destructive practices that occur in educational organisations, such as negligence and mistreatment of people, professional dishonesty, fraud and embezzlement, abuse of power, and corrupt organisational cultures. International Perspectives on Maladministration in Education shines a light on this complex topic by examining various practices at individual, group, organisational, and system levels; the contexts and influences that give rise to them; and potential remedies to ensure more accountable, just, and safe institutions.

Please note that the GaPS levels 3-5 title is 100% in line with both 2013 and 2014 tests and appears this year with a refreshed cover.

BIM for Structural Engineering and Architecture Building Information Modeling: Framework for Structural Design outlines one of the most promising new developments in architecture, engineering, and construction (AEC). Building information modeling (BIM) is an information management and analysis technology that is changing the role of computation in the architectural and engineering industries. The innovative process constructs a database assembling all of the objects needed to build a specific structure. Instead of using a computer to produce a series of drawings that together describe the building, BIM creates a single illustration representing the building as a whole. This book highlights the BIM technology and explains how it is redefining the structural analysis and design of building structures. BIM as a Framework Enabler This book introduces a new framework-the structure and

architecture synergy framework (SAS framework)—that helps develop and enhance the understanding of the fundamental principles of architectural analysis using BIM tools. Based upon three main components: the structural melody, structural poetry, and structural analysis, along with the BIM tools as the frame enabler, this new framework allows users to explore structural design as an art while also factoring in the principles of engineering. The framework stresses the influence structure can play in form generation and in defining spatial order and composition. By highlighting the interplay between architecture and structure, the book emphasizes the conceptual behaviors of structural systems and their aesthetic implications and enables readers to thoroughly understand the art and science of whole structural system concepts. Presents the use of BIM technology as part of a design process or framework that can lead to a more comprehensive, intelligent, and integrated building design Places special emphasis on the application of BIM technology for exploring the intimate relationship between structural engineering and architectural design Includes a discussion of current and emerging trends in structural engineering practice and the role of the structural engineer in building design using new BIM technologies Building Information Modeling: Framework for Structural Design provides a thorough understanding of architectural structures and introduces a new framework that revolutionizes the way building structures are designed and constructed.

Written by an experienced practitioner who has a very current understanding of the school context, this book gives a fantastically clear, detailed and realistic strategy for primary schools with regards to raising attainment and inclusive practice. Anne Massey has provided a cogent and manageable system of provision mapping for whole-school improvement. – Pippa Whittaker, SENCO, Hans Price Academy, UK. 'This very detailed book will enable schools to develop whole school approaches which improve outcomes and ensure that they are removing barriers to participation and achievement for all children.' – Dr Peter Grimes, Principal Lecturer in Inclusive School Development, Canterbury Christ Church University, UK. This highly practical book contains all the guidance and resources a school will need in order to implement an efficient and effective system of pupil progress tracking and evaluative Provision Mapping. It is a tried and tested system that has been shown to improve outcomes for all pupils, including those with SEN, and sits at the very heart of school self-evaluation. Throughout this book, teachers will find achievable solutions to the problems schools face in trying to ensure that their practice results in all pupils making good progress. Anne Massey has adapted the original version of Provision Mapping and developed it into a more evaluative framework that links a number of school improvement actions together. All the recommendations in this book have been tried and tested in Primary schools, and have been proven to: bring about better progress and engagement for all pupils; provide an enhanced understanding of inclusion by teachers; improve communication between the school, parents and the Local Authority; reduce bureaucracy and paperwork for SENCOs; foster an improved understanding of 'value for money'. Headteachers, senior managers, leadership teams, SENCOs and other educational professionals will find the guidance and support provided by this toolkit invaluable. Provision Mapping will also be of value to those studying the more SEN-specific postgraduate diplomas or Masters level qualifications.

The 2012 GCSE English results prompted significant controversy, which ultimately resulted in an application for judicial review. This report sets out the background to these events and identifies lessons to be learned. The problems with GCSE English can be traced back to the 2007-09 development phase of the qualification- in particular the turbulence which resulted from the shift away from a mostly linear to a modular system, combined with a high proportion of controlled assessment and generous marking tolerances. Exam board experts raised concerns at the time, but these were not acted upon by the regulator (the then-interim Ofqual). Further difficulties arose because of pressures from the school accountability system. The problems experienced with GCSE English in 2012 highlighted serious weaknesses in the moderation of speaking and listening, with consequences for grade awarding. The current status of Ofqual, as an independent regulator accountable to Parliament, is the right one. However, the Coalition Government is bringing in wholesale changes to GCSEs and A levels, to a tight timetable and at the same time. Ofqual must have systems in place. The Committee is also concerned that there is a rush towards separate exam systems for England, Wales and Northern Ireland, without careful reflection on what might be lost, or consensus that this is the right thing to do.

Recognizing the dominance of neoliberal forces in education, this volume offers a range of critical essays which analyze the language used to underpin these dynamics. Combining essays from over 20 internationally renowned contributors, this text offers a critical examination of key terms which have become increasingly central to educational discourse. Each essay considers the etymological foundation of each term, the context in which they have evolved, and likewise their changed meaning. In doing so, these essays illustrate the transformative potential of language to express or challenge political, social, and economic ideologies. The text's musings on the language of education and its implications for the current and future role of education in society make clear its relevance to today's cultural and political landscape. This exploratory monograph will be of interest to doctoral students, researchers, and scholars with an interest in the philosophy of education, educational policy and politics, as well as the sociology of education and the impacts of neoliberalism.
