This book deals with the analysis and design of CMOS current-mode circuits for data communications. CMOS current-mode sampled-data networks, i.e. switched-current circuits, are excluded. Major subjects covered in the book include: a critical comparison of voltage-mode and current-mode circuits; the building blocks of current-mode circuits: design techniques; modeling of wire channels, electrical signaling for Gbps data communications; ESD protection for current-mode circuits and more. This book will appeal to IC design engineers, hardware system engineers and others.

The original novel that inspired the films! First published more than fifty years ago, Pierre Boulle’s chilling novel launched one of the greatest science fiction sagas in motion picture history. In the not-too-distant future, three astronauts land on what appears to be a planet just like Earth, with lush forests, a temperate climate, and breathable air. But while it appears to be a paradise, nothing is what it seems. They soon discover the terrifying truth: On this world humans are savage beasts, and apes rule as their civilized masters. In an ironic novel of nonstop action and breathless intrigue, one man struggles to unlock the secret of a terrifying civilization, all the while wondering: Will he become the savior of the human race, or the final witness to its damnation? In a shocking climax that rivals that of the original movie, Boulle delivers the answer in a masterpiece of adventure, satire, and suspense.

La manufacture: une société hiérarchisée, disciplinée, organisée par des ingénieurs tour à tour gestionnaires. techniciens et bâtisseurs, qui ont pour mission d'administrer deux monopoles. Celui des Tabacs où l'on époularde, file. râpe et torréfie la précieuse matière première. Celui des Allumettes où l'on réduit les troncs d'arbres en tiges et manipule les produits chimiques. affectés à ces opérations, des hommes, parfois des enfants, et un nombre considérable de femmes, composent un personnel divisé en brigades, communauté solidaire travaillant sous l'autorité d'un seul et même employeur: l'État. La manufacture: un lieu d'expérimentation, où les ingénieurs mettent au point des torréfacteurs et des hachoirs à scaferlati. des moulins à poudre et des machines à confectionner les cigarettes ou les allumettes, un outillage de série perfectionné employé à la fabrication de quatre grandes catégories de produits : d'un côté, les tabacs à mâcher, à priser et à fumer, et de l'autre, les allumettes chimiques à friction, dont la qualité garantit l'intérêt du consommateur tout autant que celui du Trésor public. La manufacture : un îlot industriel isolé en centre urbain. une organisation rigoureuse pensée en termes de symétrie et d'harmonie. avec des façades soignées. des ateliers aux salles démesurées. normalisées, des poteaux, des colonnes, des charpentes, en bois, en fer ou en béton armé. A travers les exemples de Morlaix. Nantes, Le Mans et Trélazé. ce sont à la fois les espaces, les matériaux, les structures et les formes de la manufacture qui racontent ici l'histoire de l'industrie d'État, qui témoignent de l'évolution d'une pratique architecturale sur trois siècles et qui. tout en favorisant l'enracinement d'une mémoire ouvrière encore vive, concourent à la compréhension d'un patrimoine industriel d'exception.
