Vols. for 1911-13 contain the Proceedings of the Helminthological Society of Washington, ISSN 0018-0120, 1st-15th meeting.

This book constitutes the refereed proceedings of the First International Workshop on Data Integration in the Life Sciences, DILS 2004, held in Leipzig, Germany, in March 2004. The 13 revised full papers and 2 revised short papers presented were carefully reviewed and selected from many submissions. The papers are organized in topical sections on scientific and clinical workflows, ontologies and taxonomies, indexing and clustering, integration tools and systems, and integration techniques.

This book tells the story of how women first fought for inclusion among scientific societies in Edwardian Britain. Though educational opportunities in schools and universities were improving, there were few fellowships or chances of paid employment in the sciences. Excluded from most scientific societies, women were deprived of not just the chance to share their scientific experiences with other enthusiasts but of mixing with and impressing potential employers. Barriers were overcome in many cases, but not in all. This book will explore the lives of individual women who were brave pioneers and by the outbreak of WWI had proved that they were the equals of men. Many at the heart of the struggle within the sciences were also involved in the fight for suffrage, their success in the sciences helping to change men's attitudes towards women.

"This book provides methodologies and developments of grid technologies applied in different fields of life sciences"--Provided by publisher.

The UN World Commission on Environment and Development, chaired by former Norwegian Prime Minister Gro Harlem Brundtland, alerted the world to the urgency of making progress toward economic development that could be sustained without depleting natural resources or harming the environment. Written by an international group of politicians, civil servants and experts on the environment and development, the Brundtland Report changed sustainable development from a physical notion to one based on social, economic and environmental issues. This book positions the Brundtland Commission as a key event within a longer series of international reactions to pressing problems of global poverty and environmental degradation. It shows that its report, "Our Common Future", published in 1987, covered much more than its definition of sustainable development as "development that meets the needs of the present without compromising the ability of future generations to meet their own needs" for which it became best known. It also addressed a long list of issues which remain unresolved today. The book explores how the work of the Commission juggled contradictory expectations and world views, which existed within the Commission and beyond, and drew on the concept of sustainable development as a way to reconcile profound differences. The result was both an immense success and disappointment. Coining an irresistibly simple definition enabled the Brundtland Commission to place sustainability firmly on the international agenda. This definition gained acceptability for a potentially divisive concept, but it also diverted attention from underlying demands for fundamental political and social changes. Meanwhile, the central message of the Commission – the need to make inconvenient sustainability considerations a part of global politics as much as of everyday life – has been side-lined. The book thus assesses to what extent the Brundtland Commission represented an immense step forward or a missed opportunity.
