~~The broad and developing scope of ergonomics - the application of scientific knowledge to improve peoples' interaction with products, systems and environments - has been illustrated for over twenty years by the books that make up the Contemporary Ergonomics series. Presenting the proceedings of the Ergonomics Society's annual conference, the series embraces the wide range of topics. Individual papers provide insight into current practice, present new research findings and form an invaluable reference source. The volumes provide a fast track for the publication of suitable papers from international contributors. These are chosen on the basis of abstracts submitted to a selection panel in the autumn prior to the Ergonomics Society's annual conference held in the spring. A wide range of topics are covered in these proceedings, including: applications of ergonomics, air traffic control, cognitive ergonomics, defence, design, environmental ergonomics, ergonomics4schools, hospital ergonomics, inclusive design, methods and tools, occupational health and safety, slips, trips & falls and transport. As well as being of interest to mainstream ergonomists and human factors specialists, Contemporary Ergonomics will appeal to all those who are concerned with people's interactions with their working and leisure environment including designers, manufacturing and production engineers, health and safety specialists, occupational, applied and industrial psychologists, and applied physiologists.~~

~~Introduction to Health and Safety in Construction covers the specific challenges faced by the construction industry as well as the basics of occupational safety and health in general. The coverage of this book has been directly matched to the Certificate course in Construction Safety and Health from NEBOSH. However, the comprehensive coverage of health and safety topics in a construction context make it relevant for other courses in Construction Design and Management, Construction Safety and Health, and the Built Environment, both in the UK and overseas, as well as for construction professionals who are looking for an introduction to health and safety which addresses the specific problems encountered in their industry. In its second edition the book has been updated to incorporate changes in legislation, regarding: Noise Vibration COSHH Work at Height Fire Safety Construction Design and Management Asbestos The text is highly illustrated in full colour, easy to read and includes self-assessment questions taken directly from NEBOSH examinations. A chapter on study skills offers support for professionals returning to study. The text is also supported with checklists, report forms and record sheets, making it a valuable reference tool for construction managers, supervisors, designers, building and civil engineers to consult on the day to day issues of health and safety.~~

~~The Disability Support Worker is a new Australian text providing a practical introduction to the role and responsibilities for workers providing crucial support to clients with a disability.~~

~~"This booklet is written for managers and supervisors in industries that involve the manual handling of containers. It offers suggestions to improve the handling of rectangular, square, and cylindrical containers, sacks, and bags. "Improving Manual Material Handling in Your Workplace" lists the benefits of improving your work tasks. It also contains information on risk factors, types of ergonomic improvements, and effective training and sets out a four-step proactive action plan. The plan helps you identify problems, set priorities, make changes, and follow up. Sections 1 and 2 of "Improvement Options" provide ways to improve lifting, lowering, filling, emptying, or carrying tasks by changing work practices and/or the use of equipment. Guidelines for safer work practices are also included. Section 3 of "Improvement Options" provides ideas for using equipment instead of manually handling individual containers. Guidelines for safer equipment use are also included. For more help the "Resources" section contains additional information on administrative improvements, work assessment tools and comprehensive analysis methods. This section also includes an improvement evaluation tool and a list of professional and trade organizations related to material handling."--Page 6.~~

~~This book describes all parts of belt conveyors, their functions and different types presented one after the other with necessary illustrations covering all the basic aspects so that the reader can obtain an overall understanding of their operation and implementation within the field of bulk material handling, mining and mineral processing. Dedicated study of this work will also enable engineers to carry out minor repairs on their own without having to wait for maintenance personnel. This is an introductory preliminary book for beginners in the field of bulk material handling, mining and mineral processing, written in lucid, easy-to-understand language, well-illustrated, and with self-explanatory descriptions that do not compromise in maintaining academic standards while dealing with the subject matter. A salient feature of this book is that all the new terminology used to describe the components and their functions has been included and explained. Much of the content of this book has been tested and evaluated positively by graduate and postgraduate students and professional engineers of several bulk material handling plants during training programs over the last twenty-five years in India.~~

~~Achieve high standards in patient-focused care. Health Services Assistance provides complete coverage of core and elective units for assisting in nursing work in acute care. Exercises throughout the text provide students with the means to self-assess and extend their skills and knowledge. Foundation skills are developed early, underpinning understanding of the specialist acute care chapters that follow. Students are encouraged to reflect and contextualise their learning and to practise techniques in small groups. Activities break up the material so information is easier to retain. Self-check, extension activities and discussion questions can be incorporated into an institution's assessment strategy. Health Services Assistance is structured by competency for HLT33115 Certificate III in Health Services Assistance, supporting nursing in acute care, and is packed with specific cases and examples, as well as including additional content on palliative care and mental health. Each chapter addresses a competency, with a volume of learning that underpins the assessment requirements. The book is structured so that elements and criteria are communicated by the section headings. Teach following the qualification structure, using the print book, eBook or LMS integration.~~
