This study guide helps prepare students for all five key subject areas of the GED: writing, reading, social studies, math, and science, and offers information on new topics, such as space study, business documents, and number grids. Also included: - Two full-length practice tests modeled on the official GED test-plus a free online test! - Answer keys with helpful explanations - Complete information covering the GED application process and what to expect on the exam

This book comprises chapters featuring a state of the art of research on digital technology in mathematics education. The chapters are extended versions of a selection of papers from the Proceedings of the 13th International Conference on Technology in Mathematics Teaching (ICTMT-13), which was held in Lyon, France, from July 3rd to 6th. ICTMT-13 gathered together over one hundred participants from twenty countries sharing research and empirical results on the topical issues of technology and its potential to improve mathematics teaching and learning. The chapters are organised into 4 themed parts, namely assessment in mathematics education and technology, which was the main focus of the conference, innovative technology and approaches to mathematics education, teacher education and professional development toward the technology use, and mathematics teaching and learning experiences with technology. In 13 chapters contained in the book, prominent mathematics educators from all over the world present the most recent theoretical and practical advances on these themes This book is of particular interest to researchers, teachers, teacher educators and other actors interested in digital technology in mathematics education.

The Busy Ant Maths programme has assessment at the heart and from the start, embedding best practice across the school. Using the assessment tool on Collins Connect together with this guide offers you a simple and robust way of assessing and capturing progress and communicating it effectively to pupils, other teachers and parents. "The Busy Ant Maths programme has assessment at the heart and from the start, embedding best practice across the school. Using the assessment tool on Collins Connect together with this guide offers you a simple and robust way of assessing and capturing progress and communicating it effectively to pupils, other teachers and parents. Written by an expert author team with over 50 years' combined classroom experience, Busy Ant Maths is a flexible, whole-school mathematics programme that ensures conceptual understanding and mathematical fluency from the start. "

The United States is increasingly dependent on information and information technology for both civilian and military purposes, as are many other nations. Although there is a substantial literature on the potential impact of a cyberattack on the societal infrastructure of the United States, little has been written about the use of cyberattack as an instrument of U.S. policy. Cyberattacks--actions intended to damage adversary computer systems or networks--can be used for a variety of military purposes. But they also have application to certain missions of the intelligence community, such as covert action. They may be useful for certain domestic law enforcement purposes, and some analysts believe that they might be useful for certain private sector entities who are themselves under cyberattack. This report considers all of these applications from an integrated perspective that ties together technology, policy, legal, and ethical issues. Focusing on the use of cyberattack as an instrument of U.S. national policy, Technology, Policy, Law and Ethics Regarding U.S. Acquisition and Use of Cyberattack Capabilities explores important characteristics of cyberattack. It describes the current international and domestic legal structure as it might apply to cyberattack, and considers analogies to other domains of conflict to develop relevant insights. Of special interest to the military, intelligence, law enforcement, and homeland security communities, this report is also an essential point of departure for nongovernmental researchers interested in this rarely discussed topic.

Unicorn Coloring Book For Kids Age 4-8100 completely unique unicorn coloring pages for kids ages 4-8!Unicorns are so much fun to color because they lead such interesting, magical lives! They meet princesses, dragons and mermaids. They visit castles and enchanted woodlands, fly through stars and rainbow skies and even wind up in the Land of Sweets! Share the fun and magic of unicorns with a special child! This coloring book is a great non-screen activity to stimulate a child's creativity and imagination. It makes a perfect gift!About this unicorn coloring book:- Contains 100 completely unique coloring pages. There are NO duplicate images in this book.- The pages are single-sided to prevent bleed-through, and so that pages can be removed and displayed without losing an image on the back.- We have carefully designed each page to be entertaining and suitable for children in the 4 to 8 year-old age range. We have avoided overly-intricate designs as well as overly-simplistic ones. We believe children of this age love coloring fun scenes that fire up their imaginations, not a book full of simple shapes.- The pages are a nice, large 8.5x11 size

Banish math anxiety and give students of all ages a clear roadmap to success Mathematical Mindsets provides practical strategies and activities to help teachers and parents show all children, even those who are convinced that they are bad at math, that they can enjoy and succeed in math. Jo Boaler@Stanford researcher, professor of math education, and expert on math learning]has studied why students don't like math and often fail in math classes. She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students. There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home. This book bridges that gap by turning research findings into practical activities and advice. Boaler translates Carol Dweck's concept of 'mindset' into math teaching and parenting strategies, showing how students can go from self-doubt to strong self-confidence, which is so important to math learning. Boaler reveals the steps that must be taken by schools and parents to improve math education for all. Mathematical Mindsets: Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. Their evasion and departure hinders math-related pathways and STEM career opportunities. Research has shown very clear methods to change this phenomena, but the information has been confined to research journals until now. Mathematical Mindsets provides a proven, practical roadmap to mathematics success for any student at any age.

Seeing her as more than just a friend would drive my heart wild, she is special to me in every way let's call her Jana she has no idea what she makes me feel inside. I have known her a little over two years but feels like forever even when we talk every day and it's not like we haven't planned to see each other again it has been in my mind to finally be in love with a woman and she's the closest to my heart for years. Jana and I have the same thoughts also beliefs of a happy couple, no she's never been with another woman, so this is my chance to show her the love I feel but take it slowly and thoughtful as possible. I believe Jana can be happy with the right person as though it might be scary at first but what woman isn't when they go for someone new? This is my story of how my happiness to Jana Johnson was worth it. My name is Angel Knight and I'll be guiding you to beginning and end.

"An elegant and amusing account" of how gambling has been reshaped by the application of science and revealed the truth behind a lucky bet (Wall Street Journal). For the past 500 years, gamblers-led by mathematicians and scientists-have been trying to figure out how to pull the rug out from under Lady Luck. In The Perfect Bet, mathematician and award-winning writer Adam Kucharski tells the astonishing story of how the experts have succeeded, revolutionizing mathematics and science in the process. The house can seem unbeatable. Kucharski shows us just why it isn't. Even better, he demonstrates how the search for the perfect bet has been crucial for the scientific pursuit of a better world.

Shortlisted for the Waterstones Children's Book Prize 2013 (winner announced in March 2013), Junior Magazine Design Awards (best Picture Book and Best New Talent categories) and the Cambridgeshire Picture Book Award 2013! 'A thought-provoking story with a powerful message about conservation' says The Guardian's Julia Eccleshare Other titles from Frann Preston-Gannon include Dinosaur Farm (March 2013) both in paperback and box set The ice is melting so Polar Bear sets off in search of a new home. Join him on his adventures across the seas and discover the many friends he meets along the way. This beautifully illustrated story has a powerful message of conservation and is full of things for parents and children to talk about. Frann was the winner of an amazing Sendak Fellowship and spent a month living with the great Maurice Sendak himself at his home in Connecticut, USA. She worked on The Journey Home during her stay.
