Underdevelopment and the Transition to Socialism: Mozambique and Tanzania evaluates the promise and problems of socialism in the Third World by considering the political economies of Mozambique and Tanzania. The aim is to provide a basic account, for Marxists and non-Marxists alike, interested in alternative strategies of development in the Third World. It offers a materialist political economy approach that should be useful to an interdisciplinary group of scholars and practitioners. The book is organized into four parts. Part I maps out purposes and procedures. Part II on Mozambique is a factually grounded analysis of an initial conjuncture in the transition to socialism—the capture of state power by workers and peasants. Part III on Tanzania focuses on another vital step on the way to socialism—the nationalization of leading financial institutions and the attempt to place them under the aegis of the immediate producers. Part IV knits together the main strands of the foregoing analysis and ties them to the broad themes discussed at the beginning of this book.

MILLIONS OF PEOPLE THINK CHILDREN ARE THE CUTEST, CUDDLIEST, MOST WONDERFUL, SAINTLY CREATURES IN THE ENTIRE WORLD. THESE PEOPLE DO NOT HAVE CHILDREN. THEY HAVE NICE THINGS. THEY COLLECT FRAGILE POTTERY. THEY HAVE CANDLELIT DINNERS IN FANCY RESTAURANTS. THEY GO TO MOVIES. THEY HAVE WHITE CARPETS. PEOPLE WITH SMALL CHILDREN HAVEN'T BEEN TO A RESTAURANT WITHOUT PLASTIC SILVERWARE IN YEARS. THE LAST MOVIE THEY SAW IN A THEATER IS NOW ON AMERICAN MOVIE CLASSICS. THEIR HOUSE LOOKS LIKE IT WAS DECORATED BY PEE-WEE HERMAN. BABY'S FIRST TATTOO IS FOR THEM. For years parents have been buying baby books to document all the precious moments in their new baby's life -- Baby's First Tooth, Baby's First Haircut, Baby's First Step. What have been ignored for too long are those "alternative" precious moments that really should be written down, celebrated, and remembered -- Baby's First Projectile Vomit, Baby's First Tantrum in a Crowded Grocery Store, Baby's 10,000th Dirty Diaper. Otherwise you might forget them and think of becoming parents once again.

Did you know that modern guide dogs came to the United States in 1929? Guide dogs help people whose bodies do not work quite right. Learn more about the work these dogs do in Guide Dogs, a title in the Dogs with Jobs series. Each title in this series profiles a specific type of working dog showcasing the role it performs and the training required to get the job done. Each Dogs with Jobs title features easy-to-read text, stunning visuals, and a challenging educational activity. Dogs with Jobs is a series of AV2 media enhanced books. This book, published November 2015 as a 1st edition 1st printing, is the second in a series of three books that teach the fundamentals of embedded systems as applied to MSP432 microcontrollers. These books are primarily written for undergraduate electrical and computer engineering students. They could also be used for professionals learning the ARM platform. The first book Embedded Systems: Introduction to the MSP432 is an introduction to computers and interfacing focusing on assembly language and C programming. This second book focuses on interfacing and the design of embedded systems. The third book Embedded Systems: Real-Time Operating Systems for ARM Cortex-M Microcontrollers is an advanced book focusing on operating systems, high-speed interfacing, control systems, and robotics. An embedded system is a system that performs a specific task and has a computer embedded inside. A system is comprised of components and interfaces connected together for a common purpose. This book presents components, interfaces and methodologies for building systems. Specific topics include the architecture of microcontrollers, design methodology, verification, hardware/software synchronization, interfacing devices to the computer, timing diagrams, real-time systems, data collection and processing, motor control, analog filters, digital filters, real-time signal processing, wireless communication, low-power design, and the internet of things. In general, the area of embedded systems is an important and growing discipline within electrical and computer engineering. The educational market of embedded systems has been dominated by simple microcontrollers like the PIC, the 9S12, and the 8051. This is because of their market share, low cost, and historical dominance. However, as problems become more complex, so must the systems that solve them. A number of embedded system paradigms must shift in order to accommodate this growth in complexity. First, the number of calculations per second will increase from millions/sec to billions/sec. Similarly, the number of lines of software code will also increase from thousands to millions. Thirdly, systems will involve multiple microcontrollers supporting many simultaneous operations. Lastly, the need for system verification will continue to grow as these systems are deployed into safety critical applications. These changes are more than a simple growth in size and bandwidth. These systems must employ parallel programming, high-speed synchronization, real-time operating systems, fault tolerant design, priority interrupt handling, and networking. Consequently, it will be important to provide our students with these types of design experiences. The purpose of writing these books at this time is to bring engineering education into the 21st century. This book employs many approaches to learning. It will not include an exhaustive recapitulation of the information in data sheets. First, it begins with basic fundamentals, which allows the reader to solve new problems with new technology. Second, the book presents many detailed design examples. These examples illustrate the process of design. There are multiple structural components that assist learning. Checkpoints, with answers in the back, are short easy to answer questions providing immediate feedback while reading. The book includes an index and a glossary so that information can be searched. The most important learning experiences in a class like this are of course the laboratories. Each chapter has suggested lab assignments. More detailed lab descriptions are available on the web. Specifically, look at the lab assignments for EE445L and EE445M. These books will cover embedded systems for ARM Cortex-M microcontrollers with specific details on the MSP432. Although the solutions are specific for the MSP432, it will be possible to use these books for other ARM derivatives. Volume 3 can be used for either the TM4C or MSP432 families.
