screening, and genetic counseling. Resources are included to assist in patient care, patient and professional education, and identification of specialty genetics services within the New York - Mid-Atlantic region. At the end of each section, a list of references is provided for additional information. Appendices can be copied for reference and offered to patients. These take-home resources are critical to helping both providers and patients understand some of the basic concepts and applications of genetics and genomics.

This volume supports the belief that a revised and advanced science education can emerge from the convergence and synthesis of several current scientific and technological activities including examples of research from cognitive

chemistry that will permit problems to be solved in an elegant way. The first section covers the concepts necessary to understand enzymes in molecular operations. The second section covers heteroatom enzyme chemistry, with considerable attention being given to the use of enzymes in the detoxification of chemical warfare agents and their application in environmental problems. The final section highlights the strategic use of enzymes in organic chemistry. It is clear that the term 'green chemistry' is appropriate, since enzyme mediated processes occur under mild, environmentally benign conditions, and enzymes enable chemists to perform new chemical operations that would otherwise be difficult to achieve at all.

Killing a Colored Man's Pedigree is a provocative look at why it is neither cool nor an honor to be a "baby mama." As Harrison compellingly argues, it does not take a village to raise a child; it only takes two married parents. This confrontational in-depth look at the numbers documenting the increased poverty and violent crime blacks are experiencing

is proof to Michael Harrison that black American's chickens have come home to roost and that black America is reaping what it has sown for decades. Required reading for anyone who wants to understand the problems plaguing the black community, Killing a Colored Man's Pedigree asks questions and provides answers about issues that are seldom if ever discussed because of political correctness. Things you'll learn: - How the high unmarried birthrate among blacks relates to the poverty and crime that plague large parts of the black community and how, as Harrison argues, it may permanently destroy black culture in America - Clinical and scientific research that explains the importance and presence of the alpha male role model, which is woefully absent for the majority of young blacks - How our culture at large, both black

and white, tends to worship "baby mamas" and "bad boy black actors," sports stars, musicians, rappers, and the like and how this utterly exacerbates the problem - How modern culture encourages what Harrison terms a "phony victim status" in the black community (which trickles down into poor white culture), particularly among unwed black mothers - How corrupt black politicians whose personal agendas far outweigh the greater good have taken over black leadership and are leading black America astray - Practical solutions to these problems using education, media, and community outreach programs - Harrison's dream of starting a national grass roots effort promoting greater personal responsibility, which could reverse this self-destructive trend and lead to a healthier black community and greater prosperity for all

Ringings with passion, anecdotes, and a poignant plea for black America to do an all-around better job of behaving itself and raising kids, Harrison ultimately argues for greater responsibility as the answer to the pervasive problems facing the black community.

Americans are taught to believe that upward mobility is possible for anyone who is willing to work hard, regardless of their social status, yet it is often those from affluent backgrounds who land the best jobs. Pedigree takes readers behind the closed doors of top-tier investment banks, consulting firms, and law firms to reveal the truth about who really gets hired for the nation's highest-paying entry-level jobs, who doesn't, and why. Drawing on scores of in-depth

interviews as well as firsthand observation of hiring practices at some of America's most prestigious firms, Lauren Rivera shows how, at every step of the hiring process, the ways that employers define and evaluate merit are strongly skewed to favor job applicants from economically privileged backgrounds. She reveals how decision makers draw from ideas about talent—what it is, what best signals it, and who does (and does not) have it—that are deeply rooted in social class. Displaying the "right stuff" that elite employers are looking for entails considerable amounts of economic, social, and cultural resources on the part of the applicants and their parents. Challenging our most cherished beliefs about college as a great equalizer and the job market as a level playing field, *Pedigree* exposes the class biases built into American
