It's easy to produce a subwoofer that shakes a car to its core, but ensuring it retains the purity of your music is an art, and one at which Pioneer excels. The fact this active sub achieves such performance from an ultra-slim chassis (just 97mm high) is impressive, and it can be slotted in the car boot with minimal loss of space.

Driving radio-control cars is an enjoyable hobby and also a competitive sport, but the vast range of different types of models now available can prove confusing for those new to the scene. Radio Control Car Manual starts by providing all the information needed to choose the right model, and goes on to present advice on how to build kits as well as driving techniques, maintenance, modifying, set-up and the various different classes of racing. Essential reading for those contemplating buying their first model and for those already involved in the scene looking to progress to the next level.

Customized for the Salem Volcanoes(Minor League Team in Salem Oregon)This book gets rid of all the myths and misunderstandings of the baseball swing. For the first time in 120 years of baseball, we now fully understand the swing from a precise analytical perspective -- and here it is!There are two books: Book 1 (this book) is the stand-alone manual written specifically (in baseball language) for fans, ballplayers, and coaches of all levels, including Little League coaches and their dads. It carefully walks you through the swing telling you what is happening, how, and why. It's unlike anything you have ever seen in the baseball literature. You'll be amazed. For FANS, certain chapters are written specifically for you, so you (1) know what to watch for during a game; (2) how to classify batters into different styles; and (3) the final chapter describes the styles of different Home Run Kings from Babe Ruth to Barry Bonds. You'll learn lots and enjoy the game that much more. Book 2 is Technical Supplements, which are referenced in Book 1, with lots of graphs and tables -- based on our computer model which exactly matches the swing. Book 2 is for coaches, trainers, weight trainers, as well as teachers and students of the swing. Perfect for a college course!

How to design a world in which we rely less on stuff, and more on people. We're filling up the world with technology and devices, but we've lost sight of an important question: What is this stuff for? What value does it add to our lives? So asks author John Thackara in his new book, In the Bubble: Designing for a Complex World. These are tough questions for the pushers of technology to answer. Our economic system is centered on technology, so it would be no small matter if "tech" ceased to be an end-in-itself in our daily lives. Technology is not going to go away, but the time to discuss the end it will serve is before we deploy it, not after. We need to ask what purpose will be served by the broadband communications, smart materials, wearable computing, and connected appliances that we're unleashing upon the world. We need to ask what impact all this stuff will have on our daily lives. Who will look after it, and how? In the Bubble is about a world based less on stuff and more on people. Thackara describes a transformation that is taking place now—not in a remote science fiction future; it's not about, as he puts it, "the schlock of the new" but about radical innovation already emerging in daily life. We are regaining respect for what people can do that technology can't. In the Bubble describes services designed to help people carry out daily activities in new ways. Many of these services involve technology—ranging from body implants to wide-bodied jets. But objects and systems play a supporting role in a people-centered world. The design focus is on services, not things. And new principles—above all, lightness—inform the way these services are designed and used. At the heart of In the Bubble is a belief, informed by a wealth of real-world examples, that ethics and responsibility can inform design decisions without impeding social and technical innovation.
