pregnancy. A brilliant writer, first-time mother, and respected biologist, Sandra Steingraber tells the month-by-month story of her own pregnancy, weaving in the new knowledge of embryology, the intricate development of organs, the emerging architecture of the brain, and the transformation of the mother's body to nourish and protect the new life. At the same time, she shows all the hazards that we are now allowing to threaten each precious stage of development, including the breast-feeding relationship between mothers and their newborns. In the eyes of an ecologist, the mother's body is the first environment, the mediator between the toxins in our food, water, and air and her unborn child. Never before has the metamorphosis of a few cells into a baby seemed so astonishingly vivid, and never before has the threat of environmental pollution to conception, pregnancy, and even to the safety of breast milk been revealed with such clarity and urgency. In *Having Faith*, poetry and science combine in a passionate call to action. "A cross between the quirkily thorough detail of Natalie Angier's science-writing and the passionate environmental advocacy of Rachel Carson. . . . A positively riveting narrative." —Publishers Weekly "A convincing case that the increasing numbers of babies born with barriers to optimal development are a consequence of environmental insults. Should send parents and would-be parents to the barricades." —Kirkus Reviews

The Nag Hammadi Scriptures, edited by Marvin Meyer, is the most complete, up-to-date, one-volume, English-language edition of the renowned library of Gnostic manuscripts discovered in Egypt in 1945, which rivaled the Dead Sea Scrolls find in significance. It includes the Gospel of Thomas, the Gospel of Mary, and the recently discovered Gospel of Judas, as well as other Gnostic gospels and sacred texts. This volume also includes introductory essays, notes, tables, glossary, index, etc. to help the reader understand the context and contemporary significance of these texts which have shed new light on early Christianity and ancient thought. The compilation of ancient manuscripts that constitute The Nag Hammadi Scriptures is a discovery that challenges everything we thought we knew about the early Christian church, ancient Judaism, and Greco-Roman religions.

This book offers the reader an overview of the basic approaches to the theoretical description of low-temperature plasmas, covering numerical methods, mathematical models and modeling techniques. The main methods

of calculating the cross sections of plasma particle interaction and the solution of the kinetic Boltzmann equation for determining the transport coefficients of the plasma are also presented. The results of calculations of thermodynamic properties, transport coefficients, the equilibrium particle-interaction cross sections and two-temperature plasmas are also discussed. Later chapters consider applications, and the results of simulation and calculation of plasma parameters in induction and arc plasma torches are presented. The complex physical processes in high-frequency plasmas and arc plasmas, the internal and external parameters of plasma torches, near-electrode processes, heat transfer, the flow of solid particles in plasmas and other phenomena are considered. The book is intended for professionals involved in the theoretical study of low-temperature plasmas and the design of plasma torches, and will be useful for advanced students in related areas.
