ABSTRACT: A problem is a task "for which the student does not have a readily accessible mathematical means by which to achieve that resolution" (Schoenfeld, 1989, p. 88). By solving problems and facing challenges, students can start to gain expert characteristics, like metacognitive awareness, and reduce their novice mistakes. Increasing a student's problem-solving strategies can help reduce novice mistakes. Like problem solving, graphic organizers have been used to increase understanding of concepts and bridge the gap between prior knowledge and incoming information. In this study a graphic organizer was designed using Polya's (1985) problem-solving phases and Schoenfeld's (1987) questioning techniques to promote problem-solving success and increase problem-solving processes in student solutions. Students' success and process scores increased significantly by using a graphic organizer. During interviews, students reported that the graphic organizer made them slow down when solving the problems, causing them to avoid minor mistakes and errors. It was concluded that a graphic organizer can be used beyond text comprehension in reading and can promote problem-solving skills and increase problem-solving success in a secondary mathematics classroom.
