Rapidly evolving computer and communications technologies have achieved data transmission rates and data storage capacities high enough for digital video. But video involves much more than just pushing bits! Achieving the best possible image quality, accurate color, and smooth motion requires understanding many aspects of image acquisition, coding, processing, and display that are outside the usual realm of computer graphics. At the same time, video system designers are facing new demands to interface with film and computer system that require techniques outside conventional video engineering. Charles Poynton's 1996 book *A Technical Introduction to Digital Video* became an industry favorite for its succinct, accurate, and accessible treatment of standard definition television (SDTV). In *Digital Video*

and HDTV, Poynton augments that book with coverage of high definition television (HDTV) and compression systems. For more information on HDTV Retail markets, go to:

With the help of hundreds of high quality technical illustrations, this book presents the following topics: *

- Basic concepts of digitization, sampling, quantization, gamma, and filtering
- * Principles of color science as applied to image capture and display
- * Scanning and coding of SDTV and HDTV
- * Video color coding: luma, chroma (4:2:2 component video, 4fSC composite video)
- * Analog NTSC and PAL
- * Studio systems and interfaces
- * Compression technology, including M-JPEG and MPEG-2
- * Broadcast standards and consumer video equipment

The FreeBSD Handbook is a comprehensive FreeBSD tutorial and reference. It covers installation, day-to-day use of FreeBSD, and mach more, such as the Ports collection, creating a custom kernel, security topics, the X Window System, how to use FreeBSD's Linux binary compatibility, and how to upgrade your system from source using the 'make world' command, to name a few.

Digital Video Concepts, Methods, and Metrics: Quality, Compression, Performance, and Power Trade-off Analysis is a concise reference for professionals in a wide range of applications and vocations. It focuses on giving the reader mastery over the concepts, methods and metrics of digital video coding, so that readers have sufficient understanding to choose and tune coding parameters for optimum results that

would suit their particular needs for quality, compression, speed and power. The practical aspects are many: Uploading video to the Internet is only the beginning of a trend where a consumer controls video quality and speed by trading off various other factors. Open source and proprietary applications such as video e-mail, private party content generation, editing and archiving, and cloud asset management would give further control to the end-user. Digital video is frequently compressed and coded for easier storage and transmission. This process involves visual quality loss due to typical data compression techniques and requires use of high performance computing systems. A careful balance between the amount of compression, the visual quality loss and the coding speed is necessary to keep the total system cost down, while delivering a good user experience for various video applications. At the same time, power consumption optimizations are also essential to get the job done on inexpensive consumer platforms. Trade-offs can be made among these factors, and relevant considerations are particularly important in resource-constrained low power devices. To better understand the trade-offs this book discusses a comprehensive set of engineering principles, strategies, methods and metrics. It also exposes readers to approaches on how to differentiate and rank video coding solutions.

This book gathers high-quality research papers presented at the International Conference on Computing in Engineering and Technology (ICCET 2020) [formerly ICCASP], a flagship event in the area of engineering and emerging next-generation

technologies jointly organized by the Dr. Babasaheb Ambedkar Technological University and MGM's College of Engineering in Nanded, India, on 9-11 January 2020. Focusing on next-generation information processing systems, this second volume of the proceedings includes papers on cloud computing and information systems, artificial intelligence and the Internet of Things, hardware design and communication, and front-end design.

A novel and timely primer to the 3DTV system chain from capture to display This book examines all aspects of the 3DTV chain, from capture to display. It helps the reader learn about the key issues for 3DTV technology. It also provides with a systems level appreciation of 3DTV systems, and an understanding of the fundamental principles behind each part of the chain. At the end of each chapter, the author provides resources where readers can learn more about the technology covered (e.g. more focused text books, key journal papers, and key standards contributions). Provides a fundamental and systematic introduction and description of 3DTV key techniques, which build up the whole 3DTV system from capture to consumer viewing at the home. Addresses the quick moving field of 3D displays which is attracting increasing interest from industry and academia. Concepts in the book will be illustrated using diagrams and example images of processed 3D content. The 3D content will be presented as 2D images in the book. This new book provides a total solution for learning and teaching embedded system design based on the Freescale HCS12/9S12 microcontroller. Readers will learn step-by-step how to program the HCS12 using both assembly and C languages, as well as how to use such development tools as CodeWarrior, ImageCraft ICC12, MiniIDE, GNU C, and EGNU IDE. Supportive examples clearly illustrate all applications of the HCS12 peripheral functions, including parallel port, timer functions, PWM, UART port, SPI, I2C, CAN, on-chip flash and EEPROM programming, external memory expansion, and more. New sections on C programming style, software development methodology, and software reuse have been added in this revision. A back-of-book CD contains the source code for all examples in the book, several groups of reusable utility functions, and complimentary freeware development tools for improved learning.

The past he wants to forget... Nearly two decades ago, mercenary Marcus Saint left home and never looked back. But when Saint's mentor is murdered, he does the unthinkable and returns to the place he swore he'd left forever. Saint won't rest until he gets justice for his friend. What he didn't plan for was the undeniable attraction to his mentor's daughter. The tragedy that brings him back... Between coping with the loss of her father and keeping his charity afloat, Darla Daniels is being pushed to the edge. And when

Marcus Saint comes back, she's pushed over. Darla believes Saint when he promises to find her father's killer and finds passion and comfort in his arms that she'd never dreamed of. Darla tells herself to stay distant, knows that Saint won't let her in, but every moment with him only makes her feelings deeper. The woman who makes him want to stay... Saint knows he's playing with fire. He can never be the man Darla deserves, and he knows he'll eventually hurt her. But with a killer lurking far closer than he'd thought, Darla's heart might not be the only thing at risk... Military Romance, Romantic Suspense, BBW, BWWM

Extract actionable insights from text and unstructured data. Information extraction is the task of automatically extracting structured information from unstructured or semi-structured text. SAS Text Analytics for Business Applications: Concept Rules for Information Extraction Models focuses on this key element of natural language processing (NLP) and provides real-world guidance on the effective application of text analytics. Using scenarios and data based on business cases across many different domains and industries, the book includes many helpful tips and best practices from SAS text analytics experts to ensure fast, valuable insight from your textual data. Written for a broad audience of beginning, intermediate, and advanced users of SAS text analytics products, including SAS Visual Text Analytics, SAS Contextual Analysis, and SAS Enterprise Content Categorization, this book provides a solid technical reference. You will learn the SAS information extraction toolkit, broaden your

This comprehensive book provides detailed materials for both novice and experienced programmers using all BeagleBone variants which host a powerful 32-bit, super-scalar TI Sitara ARM Cortex A8 processor. Authored by Steven F. Barrett and Jason Kridner, a seasoned ECE educator along with the founder of Beagleboard.org, respectively, the work may be used in a wide variety of projects from science fair projects to university courses and senior design projects to first prototypes of very complex systems. Beginners may access the power of the "Bone" through the user-friendly Bonescript examples. Seasoned users may take full advantage of the Bone's power using the underlying Linux-based operating system, a host of feature extension boards (Capes) and a wide variety of Linux community open source libraries. The book contains background theory on system operation coupled with many well-documented, illustrative examples. Examples for novice users are centered on motivational, fun robot projects while advanced projects follow the theme of assistive technology and image processing applications. Key Features: - Provides detailed examples for all BeagleBone variants, including the newest "next generation" BeagleBone Black - BeagleBone is a low cost, open hardware, expandable computer first introduced in november 2011 by beagleboard - BeagleBone variants, including the original BeagleBone and the new beaglebone black, hosts a powerful 32-bit, super-
