Written in an accessible style, this book facilitates a deep understanding of the Rasch model. Authors Bond and Fox review the crucial properties of the Rasch model and demonstrate its use with a wide range of examples including the measurement of educational achievement, human development, attitudes, and medical rehabilitation. A glossary and numerous illustrations further aid the reader's understanding. The authors demonstrate how to

apply Rasch analysis and prepare readers to perform their own analyses and interpret the results. Updated throughout, highlights of the Second Edition include: a new CD that features an introductory version of the latest Winsteps program and the data files for the book 's examples, preprogrammed to run using Winsteps; a new chapter on invariance that highlights the parallels between physical and human science measurement; a new appendix on analyzing data to help those new to Rasch analysis; more explanation of the key concepts and item characteristic curves; a new empirical example with data sets demonstrates the many facets of the Rasch model and other new examples; and an increased focus on issues related to unidimensionality, multidimensionality, and the Rasch factor analysis of residuals. Applying the Rasch Model is intended for researchers and practitioners in psychology, especially

developmental psychologists, education, health care, medical rehabilitation, business, government, and those interested in measuring attitude, ability, and/or performance. The book is an excellent text for use in courses on advanced research methods, measurement, or quantitative analysis. Significant knowledge of statistics is not required.

This second edition presents a completely revised overview of research on intonational phonology since the 1970s, including new material on research developments since the mid 1990s. It contains a new section discussing the research on the alignment of pitch features that has developed since the first edition was published, a substantially rewritten section on ToBI transcription that takes account of the application of ToBI principles to other languages,

and new sections on the phonetic research on accent and focus. The substantive chapters on the analysis and transcription of pitch contours, pitch range, sentence stress and prosodic structure have been reorganised and updated. In addition, there is an associated website with sound files of the example sentences discussed in the book. This well-known study will continue to appeal to researchers and graduate students who work on any aspect of intonation.

Non-Native Prosody: Phonetic Description and Teaching Practice is a response to the increasing interest in the field of prosody in second language acquisition and teaching. The volume presents an overview of the state of the art in second language prosody learning and teaching and brings together linguistic research on the description and modelling of non-native prosodic structures with L2

teaching methods and practices. The first part comprises descriptions of non-native prosodic structures (including intonation, stress and speech rhythm) as well as methodological considerations of research in second language acquisition written by experts in the field. These overviews of current theoretical models and results from empirical studies are presented in a format accessible to language teachers. In the second part, some of the leading teaching practitioners and developers of phonological learning materials present a variety of methods and exercises in the area of prosody. The accompanying audio examples on a CD-ROM make a useful addition illustrating the descriptions and exercises for various target and source languages.

Given the overwhelming number of ineffective economic reform policies and programs, a central question for international development concerns how significant economic change happens. In the midst of this quandary, a puzzle has been growing quietly the last two decades. Vietnam has transitioned from a poor, centrally planned economy to one of the fastest growing, market economies in the world, despite ignoring conventional reform strategies. This book focuses on solving a specific puzzle of Vietnam's transition. Its fastest growing city, Ho Chi Minh City, has a real estate industry that ranks as the worst place in the world for private capital to invest. Nevertheless, entrepreneurs have emerged to form private firms

within the first decade of transition. Where did these people come from? How could they conduct business in such an inhospitable economic environment? The book finds that the transition to capitalism is neither the natural propensity of individuals nor the decision of an all-powerful state nor necessarily requires a long, evolutionary process. The major, rapid, and discontinuous economic change that occurred in Vietnam was fundamentally enabled by a social reconstruction of cognitive paradigms. The new social cognition framework accounts for why some firms were more successful than others as well as why Vietnam's capitalism has surprising characteristics.
