SBIR/STTR INSTRUCTIONS FOR NIH AND OTHER PHS AGENCIES SF424 (R&R) APPLICATION PACKAGES Guidance developed and maintained by NIH for preparing and submitting applications via Grants.gov to NIH and other PHS agencies using the SF424 (R&R)

SBIR/STTR Instructions for NIH and Other PHS Agencies

An application for an SBIR Phase I funding can take you 3 months to prepare. There are many different materials to put together by SBIR grant writing consultants with very specific requirements, but no good example to know what the agency wanted to see.

SBIR Studio: SBIR Guides and Proposal Samples

The Department of Defense issues three SBIR and three STTR Broad Agency Announcements (BAA) for proposals annually. Each BAA has a pre-release, open, and close period. During the pre-release period the government is not accepting proposals, but small businesses can discuss technical questions directly with the topic authors. Once the BAA is open, direct questions with the topic authors are no longer allowed, but technical questions may be submitted anonymously through the SBIR Interactive ...

The Small Business Innovation Research (SBIR) / Small Business Technology Transfer (STTR) programs provide grant funding to help companies commercialize transformative technologies. Companies that successfully receive Phase I awards are eligible to apply for Phase II grants that can generate over a million dollars to fund product development. This book provides a straightforward, user-friendly approach to preparing a Phase II application for the National Institutes of Health (NIH) SBIR/STTR programs. A 12-week strategy is presented for developing a strong Commercialization Plan, Research Plan, and Other Components that are required for a successful application. In addition, the Review and Award process, as well as post-award considerations, are described. The Eva Garland Consulting team provides deep expertise in developing competitive SBIR/STTR proposals, having successfully assisted clients who have collectively received hundreds of millions of dollars of SBIR/STTR funding.

Guide to Effective Grant Writing: How to Write a Successful NIH Grant is written to help the 100,000+ post-graduate students and professionals who need to write effective proposals for grants. There is little or no formal teaching about the process of writing grants for NIH, and many grant applications are rejected due to poor writing and weak formulation of ideas. Procuring grant funding is the central key to survival for any academic researcher in the biological sciences; thus, being able to write a proposal that effectively illustrates one's ideas is essential. Covering all aspects of the proposal process, from the most basic questions about form and style to the task of seeking funding, this volume offers clear advice backed up with excellent examples. Included are a number of specimen proposals to help shed light on the important issues surrounding the writing of proposals. The Guide is a clear, straight-forward, and reader-friendly tool. Guide to Effective Grant Writing: How to Write a Successful NIH Grant Writing is based on Dr. Yang's extensive experience serving on NIH grant review panels; it covers the common mistakes and problems he routinely witnesses while reviewing grants.

Authors William Gerin, Christine Kapelewski, and Niki L. Page are here to help you secure NIH funding for your research! Writing the NIH Grant Proposal, Third Edition offers hands-on advice that simplifies, demystifies, and takes the fear out of writing a federal grant application. Acting as a virtual mentor, this book provides systematic guidance for every step of the NIH application process, including the administrative details, developing and managing collaborative relationships, budgeting, and building a research team. Helpful hints along the way provide tips from researchers who have received grants themselves. New to this Edition: Much more user-friendly in response to the updated NIH website Covers the new Application Submission System & Interface for Submission Tracking (ASSIST) online submission form for both single and multiple projects Revamped advice on substantive sections of the proposal to address lowered page allowance Coverage of the new scoring system and reviewer reporting system Coverage of the usage and submission of the new SF 424 forms

Newly updated for 2020 DoD SBIR Release! The purpose of this book is to guide you through the DoD SBIR program and make your proposal creation easier, compliant and increase your success probability. My intent is that you will effectively: •Understand the DoD SBIR program •Learn my method for getting solicitation' topics tailored to the problem you solve •Create a compliant and standout proposal with the aid of real world sample proposal components •Understand the process of contracting•Position your project for a follow-on Phase II contract This book provides a practical, step by step process to get you from a concept to an actual proposal, while arming you with the knowledge needed to successfully execute and position yourself for a Phase II award. The sequential chapters allow one to: 1.Understand the basics of the program and answer the pressing questions you may have, such as: a.Am I eligible? b.What do I give up? c.Who owns the intellectual property? 2.Complete all required entity registrations prior to proposal submission 3.Introduction to the BAA and topic solicitations 4.Present my method for getting a potential solicitation created for your solution 5.Learn about the role and requirements of the principal investigator 6.Detailed and step by step instructions on proposal generation to include requirements, tips, formats and a sample of the sections 7.How to upload your proposal into the DoD SBIR portal 8.Provide our history of contracting so you are better

prepared 9.I provide some recommendations on executing your Phase I project to better position your project for Phase II consideration 10.Finally, a glossary to help navigate all relevant acronyms For more information and resources visit us at www.sbirguide.com

The SBIR program allocates 2.5 percent of 11 federal agencies' extramural R&D budgets to fund R&D projects by small businesses, providing approximately \$2 billion annually in competitive awards. At the request of Congress the National Academies conducted a comprehensive study of how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs. Drawing substantially on new data collection, this book examines the SBIR program at the National Institutes of Health and makes recommendations for improvements. Separate reports will assess the SBIR program at DOD, NSF, DOE, and NASA, respectively, along with a comprehensive report on the entire program.

The Small Business Innovation Research (SBIR) program is one of the largest examples of U.S. public-private partnerships. Founded in 1982, SBIR was designed to encourage small business to develop new processes and products and to provide quality research in support of the many missions of the U.S. government, including health, energy, the environment, and national defense. In response to a request from the U.S. Congress, the National Research Council assessed SBIR as administered by the five federal agencies that together make up 96 percent of program expenditures. This book, one of six in the series, reports on the SBIR program at the National Science Foundation. The study finds that the SBIR program is sound in concept and effective in practice, but that it can also be improved. Currently, the program is delivering results that meet most of the congressional objectives, including stimulating technological innovation, increasing private-sector commercialization of innovations, using small businesses to meet federal research and development needs, and fostering participation by minority and disadvantaged persons. The book suggests ways in which the program can improve operations, continue to increase private-sector commercialization, and improve participation by women and minorities.

The Small Business Innovation Research (SBIR) program is one of the largest examples of U.S. public-private partnerships, and was established in 1982 to encourage small businesses to develop new processes and products and to provide quality research in support of the U.S. government's many missions. The U.S. Congress tasked the National Research Council with undertaking a comprehensive study of how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs, and with recommending further improvements to the program. In the first round of this study, an ad hoc committee prepared a series of reports from 2004 to 2009 on the SBIR program at the five agencies responsible for 96 percent of the program's operations -- including the National Science Foundation (NSF). Building on the outcomes from the first round, this second round presents the committee's second review of the NSF SBIR program's operations. Public-private partnerships like SBIR are particularly important since today's knowledge economy is driven in large part by the nation's capacity to innovate. One of the defining features of the U.S. economy is a high level of entrepreneurial activity. Entrepreneurs in the United States see opportunities and are willing and able to assume risk to bring new welfare-enhancing, wealth-generating technologies to the market. Yet, although discoveries in areas such as genomics, bioinformatics, and nanotechnology present new opportunities, converting these discoveries into innovations for the market involves substantial challenges. The American capacity for innovation can be strengthened by addressing the challenges faced by entrepreneurs.
