This book examines trends and challenges in research on IT governance in public organizations, reporting innovative research and new insights in the theories, models and practices within the area. As we noticed, IT governance plays an important role in generating value from organization's IT investments. However there are different challenges for researchers in studying IT governance in public organizations due to the differences between political, administrative, and practices in these organizations. The first section of the book looks at Management issues, including an introduction to IT governance in public organizations; a systematic review of IT alignment research in public organizations; the role of middle managers in aligning strategy and IT in public service organizations; and an analysis of alignment and governance with regard to IT-related policy decisions. The second section examines Modelling, including a consideration of the challenges faced by public administration; a discussion of a framework for IT governance implementation suitable to improve alignment and communication between stakeholders of IT services; the design and implementation of IT architecture; and the adoption of enterprise architecture in public organizations. Finally, section three presents Case Studies, including IT governance in the context of e-government strategy implementation in the Caribbean; the relationship of IT organizational structure and IT governance performance in the IT department of a public research and education organization in a developing country; the relationship between organizational ambidexterity and IT governance through a study of the Swedish Tax Authorities; and the role of institutional logics in IT project activities and interactions in a large Swedish hospital.

The use of information and communication technologies to support public administrations, governments and decision makers has been recorded for more than 20 years and dubbed e-Government. Moving towards open governance roadmaps worldwide, electronic participation and citizen engagement stand out as a new domain, important both for decision makers and citizens; and over the last decade, there have been a variety of related pilot projects and innovative approaches. With contributions from leading researchers, Charalabidis and Koussouris provide the latest research findings such as theoretical foundations, principles, methodologies, architectures, technical frameworks, cases and lessons learnt within the domain of open, collaborative governance and online citizen engagement. The book is divided into three sections: Section one, "Public Policy Debate Foundations," lays the foundations regarding processes and methods for scoping, planning, evaluating and transforming citizen engagement. The second section, "Information and Communication Technologies for Citizen Participation," details practical approaches to designing and creating collaborative governance infrastructures and citizen participation for businesses and administrations. Lastly, the third section on "Future Research Directions of Open, Collaborative ICT-enabled Governance" provides a constructive critique of the developments in the past and presents prospects regarding future challenges and research directions. The book is mainly written for academic researchers and graduate students working in the computer, social, political and management sciences. Its audience includes researchers and practitioners in e-Governance, public administration officials, policy and decision makers at the local, national and international level engaged in the design and creation of policies and services, and ICT professionals engaged in e-Governance and policy modelling projects and solutions.

The Government of Panama and the private sector recognize the importance of information and communications technology (ICT) as an enabler of national development. This ICT sector policy note seeks to identify opportunities and challenges for growth of the ICT sector in Panama, particularly on rural access to broadband services and on cybersecurity, and potential for spillover impacts across other sectors. It provides a brief overview of the ICT sector in Panama and outlines a series of strategic actions and recommendations aimed at leveraging ICT as an engine of growth by targeting connectivity infrastructure, policies, regulation, e-Services, public data, and skills. The report is organized as follows: section one presents ICT sector in the economy. Section two deals with offer for connectivity. Section three presents demand. Section four describes the sector status from the cybersecurity point of view. Based on these analyses, section five identifies challenges that are hindering the growth of the industry, and section six presents policy options to overcome them. Finally, the World Bank describes the ways it can support those policy options in section seven and presents a set of joint activities in section eight.
