It looks at the question of transnational civil ties and the identities which emerge during the process of European integration and how they relate to national and sub-national identities.

Mechanics of Machines is designed for undergraduate courses in kinematics and dynamics of machines. It covers the basic concepts of gears, gear trains, the mechanics of rigid bodies, and graphical and analytical kinematic analyses of planar mechanisms. In addition, the text describes a procedure for designing disc cam mechanisms, discusses graphical and analytical force analyses and balancing of planar mechanisms, and illustrates common methods for the synthesis of mechanisms. Each chapter concludes with a selection of problems of varying length and difficulty. SI Units and US Customary Units are employed. An appendix presents twenty-six design projects based on practical, real-world engineering situations. These may be ideally solved using Working Model software.

In this searing, authentic memoir, Elizabeth is hired to herd goats on a remote mountain farm in the South of France where she carves out a life for herself without heat, running water, or even a good grasp of French. Far from her younger life as a New England preppie and Oregon hippie, the challenges of farm work daunt her. She befriends an Australian shepherd, reflects on her spirituality, and muses on the man she left behind. As she grows stronger, Elizabeth faces her self-doubt while maintaining her humor, eking fun wherever she can. When tragedy strikes Elizabeth's adopted family, she summons belief in herself and becomes the leader they desperately need.
