During the last few years, industrial

fermentation technologies have advanced in order to improve the quality of the final product. Some examples of those modern technologies are

biotechnology
developments of
microbial
materials, such
as Saccharomyces

yeasts or lactic
bacteria from
different
genera. Other
technologies are

Most people think of Alzheimer's disease as a condition which predominately affects elderly people, but an increasing amount of evidence

indicates that in populations exposed to high concentration of air pollutants, Alzheimer's disease development and progression can be identified in pediatric and young adulthood ages. Cognitive, olfactory, gait,
