Six-time Hugo Award-winner Ben Bova presents Transhuman. Luke Abramson, a brilliant cellular biologist has one joy in life, his ten-year-old granddaughter, Angela. When he learns that Angela has an inoperable brain tumor and is given less than six months to live, Abramson wants to try an experimental new therapy that he believes will kill Angela's tumor. Her parents object and the hospital bureaucracy blocks the experimental procedure because it has not been approved by the FDA. Knowing that Angela will die before he can get approval, Abramson abducts Angela from the hospital. He plans to take her to a private research laboratory in Oregon. Luke has turned his old SUV into a makeshift medical facility, treating Angela as best he can while they are on the road, desperately trying to keep his granddaughter alive long enough to give her the treatment he believes will save her life. Abramson realizes that he's too old and decrepit to flee across the country with his sick granddaughter, so he injects himself with a genetic factor that has successfully reversed aging in animal tests. As the chase weaves across the country from one research facility to another, Luke begins to grow physically younger, stronger. He looks and feels the way he did thirty or forty years ago. But will he be able to save Angela?

A terminally ill cellular biologist uses a medication that unexpectedly causes him to age backwards while he flees the FBI with his young granddaughter to obtain a not-yet-approved treatment for her inoperable brain tumor. By the Hugo Award-winning author of Farside. 15,000 first printing.

New Frontiers, fourteen startling visions of yesterday, today, and tomorrow from Ben Bova, six-time winner of the Hugo Award Frontiers can be found in all directions. Frontiers of time and space, as well as frontiers of courage, devotion, love, hate, and the outer limits of the human spirit. This outstanding collection of stories by one of science fiction's premier talents spans the length and breadth of history and the universe, while exploring thought-provoking new ideas and dilemmas. From the Baghdad of the Arabian Nights to a vast interstellar empire thousands of years in the future, from the Vatican to a one-man vessel drifting in the vast emptiness of the Asteroid Belt, from virtual reality duels to the subtle intricacies of time travel and a golf tournament on the Moon, here are tales of scoundrels and heroes, scientists and explorers, aliens and artificial intelligences, and even a young Albert Einstein. Each of them stands at the border of a new frontier and must venture out into unexplored territory—thanks to the limitless imagination of Ben Bova. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

"Science fiction as it should be written." Isaac AsimovHe will stop at nothing to save her ...Luke Abramson's granddaughter is dying of cancer. A living nightmare.The prognosis is dire.Despite the odds, Abramson, a renowned cellular biologist, is certain that he can cure his granddaughter, Angela, by destroying the tumours that are taking her life. But a number of problems stand in his way. Going against the desires of Angela's parents, Abramson's smuggles Angela out of the hospital.Now begins a race against time — and the authorities — to treat Angela's cancer. Whether or not he will succeed, it soon becomes clear that the very treatment he is giving his granddaughter could be the key to a longer, better life for the whole of humanity. But the authorities are not the only ones interested in Abramson's experiments. Soon Abramson not only has to protect his granddaughter, but his science too. But who can he trust?From renowned science fiction writer Ben Bova comes Transhuman, a perfectly balanced hard science fiction with a gripping narrative. Praise for Ben Bova:"This is a highly successful fusion of SF and political thriller." — Publishers Weekly"One of the rare science-fiction books that deserves a wide audience." — Chicago Sun-Times"Bova proves himself equal to the task of showing how adversity can temper character in unforeseen ways." — The New York Times"a must-read" — Booklist"One of the genre's most accessible and entertaining storytellers." — Library Journal"Slick, snappy narrative, worthy convictions, all-too-plausible forecasts." — Kirkus Reviews"Millennium is the crowning achievement of Ben Bova's career to date ... one of the most sheerly believable stories in science fiction." — Galaxy Magazine"Bova's novel hinges on the hope that somewhere, somehow, there will be enough people with enough vision to see beyond national boundaries and to act in the cause of humanity." — St. Louis Post-Dispatch"... one of the most pleasant tales of terror I have ever read." — LunaBen Bova was Editor of Analog Science Fiction-Science Fact magazine, the most widely read and influential science fiction magazine in the world. He received the Science Fiction Achievement Award (Hugo) for best editor of the year in 1973, 1974, and 1975. His short stories and science articles have appeared in all the major science fiction magazines, as well as the Smithsonian Magazine, the IEEE Spectrum, School Library Journal, and many other periodicals. His book The Fourth State of Matter was honored as one of the top one hundred science books of the year 1971 by the American Librarians' Association. Star flight and Other Improbabilities was selected as a Junior Literary Guild book in 1973. He was the 1974 recipient of the New England Science Fiction Society's E. E. Smith Memorial Award for Imaginative Fiction.

When a nuclear missile launched by a rogue North Korean faction explodes in space the resulting shockwave destroys the world's satellites, throwing global communication into chaos. The United States military satellites, designed to withstand such an assault, show that two more missiles are sitting on the launch pad in North Korea, ready to be deployed. Faced with the threat of a thermonuclear attack, the United States has only one possible defense: Able One. ABL-1, or Able One, is a modified 747 fitted with a high-powered laser able to knock out missiles in flight. But both the laser's technology and the jet's crew are untested. What was originally to be a training flight with a skeleton crew turns into a desperate race to destroy the two remaining nukes. Will Able One's experimental technology be enough to prevent World War III—especially when it becomes clear that a saboteur is onboard? Able One is a timely thrill-ride by one of science fiction's most respected novelists. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Out of the Sun is a novel by Ben Bova, one of the field's leading writers of "hard science fiction." At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Two hundred thousand feet up, things go horribly wrong. An experimental low-orbit spaceplane breaks up on reentry, falling to earth over a trail hundreds of miles long. And it's wake is the beginning of the most important mission in the history of space. America needs energy, and Dan Randolph is determined to give it to them. He dreams of an array of geosynchronous powersats, satellites which gather solar energy and beam it to generators on Earth, freeing America from its addiction to fossil fuels and breaking the power of the oil cartels forever. But the wreck of the spaceplane has left his company, Astro Manufacturing, on the edge of bankruptcy. Worse, Dan discovers that the plane worked perfectly right up until the moment that saboteurs knocked it out of the sky. And whoever brought it down is willing and able to kill again to keep Astro grounded. Now Dan has to thread a dangerous maze. The visible threats are bad enough: Rival firms want to buy him out and take control of his dreams. His former lover wants to co-opt his unlimited-energy ideal as a campaign plank for the candidate she's grooming for the presidency. NASA and the FAA want to shut down his maverick firm. And his creditors are breathing down his neck. Making matters even more dangerous, an international organization of terrorists sees the powersat as a threat to their own oil-based power. And they've figured out how to use it as a weapon in their war against the West. A sweeping mix of space, murder, romance, politics, secrets, and betrayal, Powersat will take you to the edge of space and the dawning of a new world. Six-time Hugo Award winner Ben Bova chronicles the saga of humankind's expansion beyond the solar system in Apes and Angels, the last installment in the Star Quest Trilogy. Humankind headed out to the stars not for conquest, nor exploration, nor even for curiosity. Humans went to the stars in a desperate crusade to save intelligent life wherever they found it. A wave of death is spreading through the Milky Way galaxy, an expanding sphere of lethal gamma radiation that erupted from the galaxy's core twenty-eight thousand years ago and now is approaching Earth's vicinity at the speed of light. Every world it touched was wiped clean of all life. But it 's possible to protect a planet from gamma radiation. Earth is safe. Now, guided by the ancient intelligent machines called the Predecessors, men and women from Earth seek out those precious, rare worlds that harbor intelligent species, determined to save them from the doom that is hurtling toward them. The crew of the Odysseus has arrived at Mithra Gamma, the third planet of the star Mithra, to protect the stone-age inhabitants from the Death Wave. But they ' ll also have to protect themselves.

Hugo Award winner Ben Bova continues his grand tour of the human settled solar system with a fan-pleasing look at life in the Outer Planets, among the moons of Neptune. In the future, humanity has spread throughout the solar system, on planets and moons once visited only by robots or explored at a distance by far-voyaging spacecraft. No matter how hostile or welcoming the environment, mankind has forged a path and found a home. In the far reaches of the solar system, the outer planets—billions of miles from Earth, unknown for millennia—are being settled. Neptune, the ice giant, is swathed in clouds of hydrogen, helium, and methane and circled by rings of rock and dust. Three years ago, Ilona Magyr ' s father, Miklos, disappeared while exploring the seas of Neptune. Everyone believes he is dead—crushed, frozen, or boiled alive in Neptune ' s turbulent seas. With legendary space explorer Derek Humbolt piloting her ship and planetary scientist Jan Meitner guiding the search, Ilona Magyr knows she will find her father—alive—on Neptune. Her plans are irrevocably altered when she and her team discover the wreckage of an alien ship deep in Neptune ' s ocean, a discovery which changes humanity ' s understanding of its future...and its past.
