Exploring Earth Science by Reynolds/Johnson is an innovative textbook intended for an introductory college geology course, such as Earth Science. This ground-breaking, visually spectacular book was designed from cognitive and educational research on how students think, learn, and study. Nearly all information in the book is built around 2,600 photographs and

stunning illustrations, rather than being in long blocks of text that are not articulated with figures. These annotated illustrations help students visualize geologic processes and concepts, and are suited to the way most instructors already teach. To alleviate cognitive load and help students focus on one important geologic process or concept at a time, the book consists entirely of two-page spreads organized into 20 chapters. Each two-page spread is a self-contained block of information about a specific topic, emphasizing geologic concepts, processes, features, and approaches. These spreads help students learn and organize geologic knowledge in a new and exciting way. Inquiry is embedded

throughout the book, modeling how scientists investigate problems. The title of each two-page spread and topic heading is a question intended to get readers to think about the topic and become interested and motivated to explore the two-page spread for answers. Each chapter is a learning cycle, which begins with a visually engaging two-page spread about a compelling geologic issue. Each chapter ends with an Investigation that challenges students with a problem associated with a virtual place. The world-class media, spectacular presentations, and assessments are all tightly articulated with the textbook. This book is designed to encourage students to observe, interpret, think critically, and

Joss Whedon ' s Firefly with the talent of sci-fi author John Scalzi. In the mid-23rd century, Darwin, Australia, stands as the last human city on Earth. The world has succumbed to an alien plague, with most of the population transformed into mindless, savage creatures. The planet ' s refugees flock to Darwin, where a space elevator—created by the architects of this apocalypse, the Builders—emits a plague-suppressing aura. Skyler Luiken has a rare immunity to the plague. Backed by an international crew of fellow “ immunes, ” he leads missions into the dangerous wasteland beyond the aura ' s edge to find the resources Darwin needs to stave off collapse. But when the Elevator starts to malfunction,

Skyler is tapped—along with the brilliant scientist, Dr. Tania Sharma—to solve the mystery of the failing alien technology and save the ragged remnants of humanity. Praise for *The Darwin Elevator* “ A hell of a fun book. ” —James S. A. Corey, New York Times bestselling author of *Abaddon ’ s Gate* “ [Jason M.] Hough ’ s first novel combines the rapid-fire action and memorable characters associated with Joss Whedon ’ s short-lived *Firefly* TV series with the accessibility and scientific acumen of [James S. A.] Corey ’ s ‘ *Expanse* ’ series. ” —Library Journal (starred review) “ The best part about alien stories is their mystery, and Jason Hough understands that like no other. Full of compelling

and forces you to read with held breath as you anticipate the inevitable fall. ” —Hugh Howey, New York Times bestselling author of Wool

What do ancient reptile fossils have to do with radioactive atoms deep inside the Earth's mantle? What causes earthquakes and volcanic eruptions? Why are there strange creatures living deep beneath the ocean surface, where hot water and chemicals spew out of cracks in the ocean floor? The answer to all of these is the same: plate tectonics. Over the last century, scientists have discovered how heat generated deep inside the Earth drives

movements of the mantle and crust - and how in our Solar System, this process is almost unique to our home planet. All of this is real, cutting-edge science, written at a level that kids can read and understand. At the end of the book, you will find a self-quiz to test your new knowledge and fun hands-on activities that build on the science. Judith Hubbard is a geology professor with a Ph.D. from Harvard University and a B.S. from Caltech - and also two young children. She started the In Depth Science series with the goal of making college-level science accessible to kids as young as eight years old.
