From the Pulitzer Prize finalist and National Book Critics Circle Award–winning author of *Newjack*, an absorbing book about roads and their power to change the world. Roads bind our world—metaphorically and literally—transforming landscapes and the lives of the people who inhabit them. Roads have unparalleled power to impact communities, unite worlds and sunder them, and reveal the hopes and fears of those who travel them. With his marvelous eye for detail and his contagious enthusiasm, Ted Conover explores six of these key byways worldwide. In Peru, he traces the journey of a load of rare mahogany over the Andes to its origin, an untracked part of the Amazon basin soon to be traversed by a new east-west route across South America. In East Africa, he visits truckers whose travels have been linked to the worldwide spread of AIDS. In the West Bank, he monitors highway checkpoints with Israeli soldiers and then passes through them with Palestinians, witnessing the injustices and danger borne by both sides. He shuffles down a frozen riverbed with teenagers escaping their Himalayan valley to see how a new road will affect the now-isolated Indian region of Ladakh. From the passenger seat of a new Hyundai piling up the miles, he describes the exuberant upsurge in car culture as highways proliferate across China. And from inside an ambulance, he offers an apocalyptic but precise vision of Lagos, Nigeria, where congestion and chaos on freeways signal the rise of the global megacity. A spirited, urgent book that reveals the costs and benefits of being connected—how, from ancient Rome to the present, roads have played a crucial role in human life, advancing civilization even as they set it back.

A tale of Tinseltown insanity and one woman's journey from Hollywood Nobody to somebody in her own right.

Modeling in Transport Phenomena, Second Edition presents and clearly explains with example problems the basic concepts and their applications to fluid flow, heat transfer, mass transfer, chemical reaction engineering and thermodynamics. A balanced approach is presented between analysis and synthesis, students will understand how to use the solution in engineering analysis. Systematic derivations of the equations and the physical significance of each term are given in detail, for students to easily understand and follow up the material. There is a strong incentive in science and engineering to understand why a phenomenon behaves the way it does. For this purpose, a complicated real-life problem is transformed into a mathematically tractable problem while preserving the essential features of it. Such a process, known

as mathematical modeling, requires understanding of the basic concepts. This book teaches students these basic concepts and shows the similarities between them. Answers to all problems are provided allowing students to check their solutions. Emphasis is on how to get the model equation representing a physical phenomenon and not on exploiting various numerical techniques to solve mathematical equations. A balanced approach is presented between analysis and synthesis, students will understand how to use the solution in engineering analysis. Systematic derivations of the equations as well as the physical significance of each term are given in detail. Many more problems and examples are given than in the first edition - answers provided

For anyone who wants to learn the fundamentals of branding in an approachable way without poring over dense text or hiring an expensive consultant, Star Brands presents a unique model that offers structured guidance and professional tips for building, managing, and marketing any brand. Created by savvy brand manager Carolina Rogoll, the star brand model is a perfect intersection of solid marketing and management theory with an approachable, visually oriented design. The author teaches step-by-step how to assess a brand's unique challenge, how to define the brand's equity and target, how to craft a solid brand growth strategy, and how to measure success once the brand is in the marketplace. The book includes case studies from famous star brands as well as interviews with top business school professors, advertising agency leaders, and former CEOs. Topics covered include the star brand model; leaders behind star brands; brand assessment and goal setting; defining brand equity; selecting a brand target; insights, benefits, ideas; theory from the best marketing and managing resources; marketing strategy; how to build a marketing plan; and much more, including exercise worksheets to practice on! The author combines her experience building brands at the front lines of a big multinational company with top-notch marketing and management theory. What results is an ideal primer for anyone seeking structured guidance on building a brand for a client, managing a brand, or even starting a brand for oneself. Allworth Press, an imprint of Skyhorse Publishing, publishes a broad range of books on the visual and performing arts, with emphasis on the business of art. Our titles cover subjects such as graphic design, theater, branding, fine art, photography, interior design, writing, acting, film, how to start careers, business and legal forms, business practices, and more. While we don't aspire to publish a New York Times bestseller or a national bestseller, we are deeply committed to quality books that help creative professionals succeed and thrive. We often publish in areas overlooked by other publishers and welcome the author whose expertise can help our audience of readers.

Modelling in Transport Phenomena: A Conceptual Approach aims to show students how to translate the inventory rate equation into mathematical terms at both the macroscopic and microscopic levels. The emphasis is on obtaining the equation representing a physical phenomenon and its interpretation. The book begins with a discussion of basic concepts and their characteristics. It then explains the terms appearing in the inventory rate equation, including "rate of input" and "rate of output." The rate of generation in transport of mass, momentum, and energy is also described. Subsequent chapters detail the application of inventory rate equations at the macroscopic and microscopic levels. This book is intended as an undergraduate textbook for an introductory Transport Phenomena course in the junior year. It can also be used in unit operations courses in conjunction with standard textbooks. Although it is written for students majoring in chemical engineering, it can also serve as a reference or supplementary text in environmental, mechanical, petroleum, and civil engineering courses.
