Language research thrives on data collected from spontaneous

interactions in naturally occurring situations.

However, the process of collecting, transcribing, and analyzing naturalistic data can be extremely time-consuming and often unreliable. This book describes three basic tools for language analysis of transcript data by computer that have been developed in

the context of the "Child

Language Data

Exchange System

(CHILDES)" project.

These are: the "CHAT"
transcription and coding

format, the "CLAN"

package of analysis

programs, and the

"CHILDES" database.

These tools have

brought about

significant changes in

the way research is

conducted in the child language field. They are being used with great success by researchers working with second language learning, adult conversational interactions, sociological content analyses, and language recovery in aphasia, as well as by students of child language development. The tools

are widely applicable, although this book concentrates on their use in the child language field, believing that researchers from other areas can make the necessary analogies to their own topics. This thoroughly revised 2nd edition includes documentation on a dozen new computer programs that have been

added to the basic system for transcript analysis. The most important of these new programs is the "CHILDES" Text Editor (CED) which can be used for a wide variety of purposes, including editing non-Roman orthographies, systematically adding codes to transcripts, checking the files for

correct use of "CHAT,"
and linking the files to
digitized audio and
videotape. In addition to
information on the new
computer programs, the
manual documents
changed the shape of the
"CHILDES/BIB"
system--given a major
update in 1994--which
now uses a new
computer database
system. The

Acces PDF Gpx Mp3 Player

documentation for the "CHILDES" transcript database has been updated to include new information on old corpora and information on more than a dozen new corpora from many different languages.

Finally, the system of "CHAT" notations for file transcript have been clarified to emphasize the ways in which the

codes are used by particular "CLAN" programs. The new edition concludes with a discussion of new directions in transcript analysis and links between the "CHILDES" database and other developments in multimedia computing and global networking. It also includes complete

platforms.
