Indoor air quality (IAQ) is increasingly making front-page headlines, and the magnitude of the problem is just beginning to surface. Designed for engineers and architects, this reference on IAQ includes coverage of the control and assessment of asbestos, radon, carbon monoxide and other contaminants; investigative procedures; measurement and monitoring techniques; inspection and testing; and bacteriological and biological issues.

New edition of introductory textbook, ideal for students taking a course on air pollution and global warming, whatever their background. Comprehensive introduction to the history and science of the major air pollution and climate problems facing the world today, as well as energy and policy solutions to those problems.

Rates of oxidation of U(IV) solutions by air under various conditions similar to those prevailing in ore leach liquors were determined.

This timely new workbook is the result of a year-long effort by a group of university professors who first met at Montana Tech during the summer of 1994 for a college faculty workshop. The workshop was funded by the National Science Foundation's support for those faculty developing courses in the newly emerging field of air toxics. Part I of the book contains over 100 problems dealing with a variety of topics in this area. Part II provides detailed solutions. The problems and solutions provided will become a useful resource for the training of engineers and scientists who are or soon will be working in the field.

Throughout history, humans have been finding and developing ever-faster modes of transportation — moving from horses to the cars and high-speed jets of today. We have been very successful in our search for faster transportation, but it has come at a price. Our vehicles have all had an effect on the natural environment. The good news is there are a growing number of people devoting their lives to solving environmental issues related to transportation. The young adults of today will be the job force of tomorrow, so choosing a career that will best fit with the needs of the changing world will be important to job satisfaction and a successful life. With the vast array of career and job options, it will also be important for young adults to understand which work will be the best match for their interests, talents, goals, and personality types. Certain careers are expected to gain importance within the early decades of the twenty-first century. The opportunities for jobs related to "green" transportation are expected to increase at a faster than average rate as the world looks to repair damages already done to the environment and prevent new problems. The future of the planet is dependent on the development of cleaner and greener forms of transportation. If you choose a career in green transportation, you can help put us on the road to a better world!

As our world becomes more industrialized, with new developing countries, expanding factories, and a growing global population, changes are happening to the air we breathe. In fact, those changes have been taking place over the course of many decades. This book offers an in-depth study of the history of the problem, featuring fast facts on air pollution and solutions for how we might make our air cleaner, healthier, and more breathable for the future.
